

As we know, for successful treatment ...

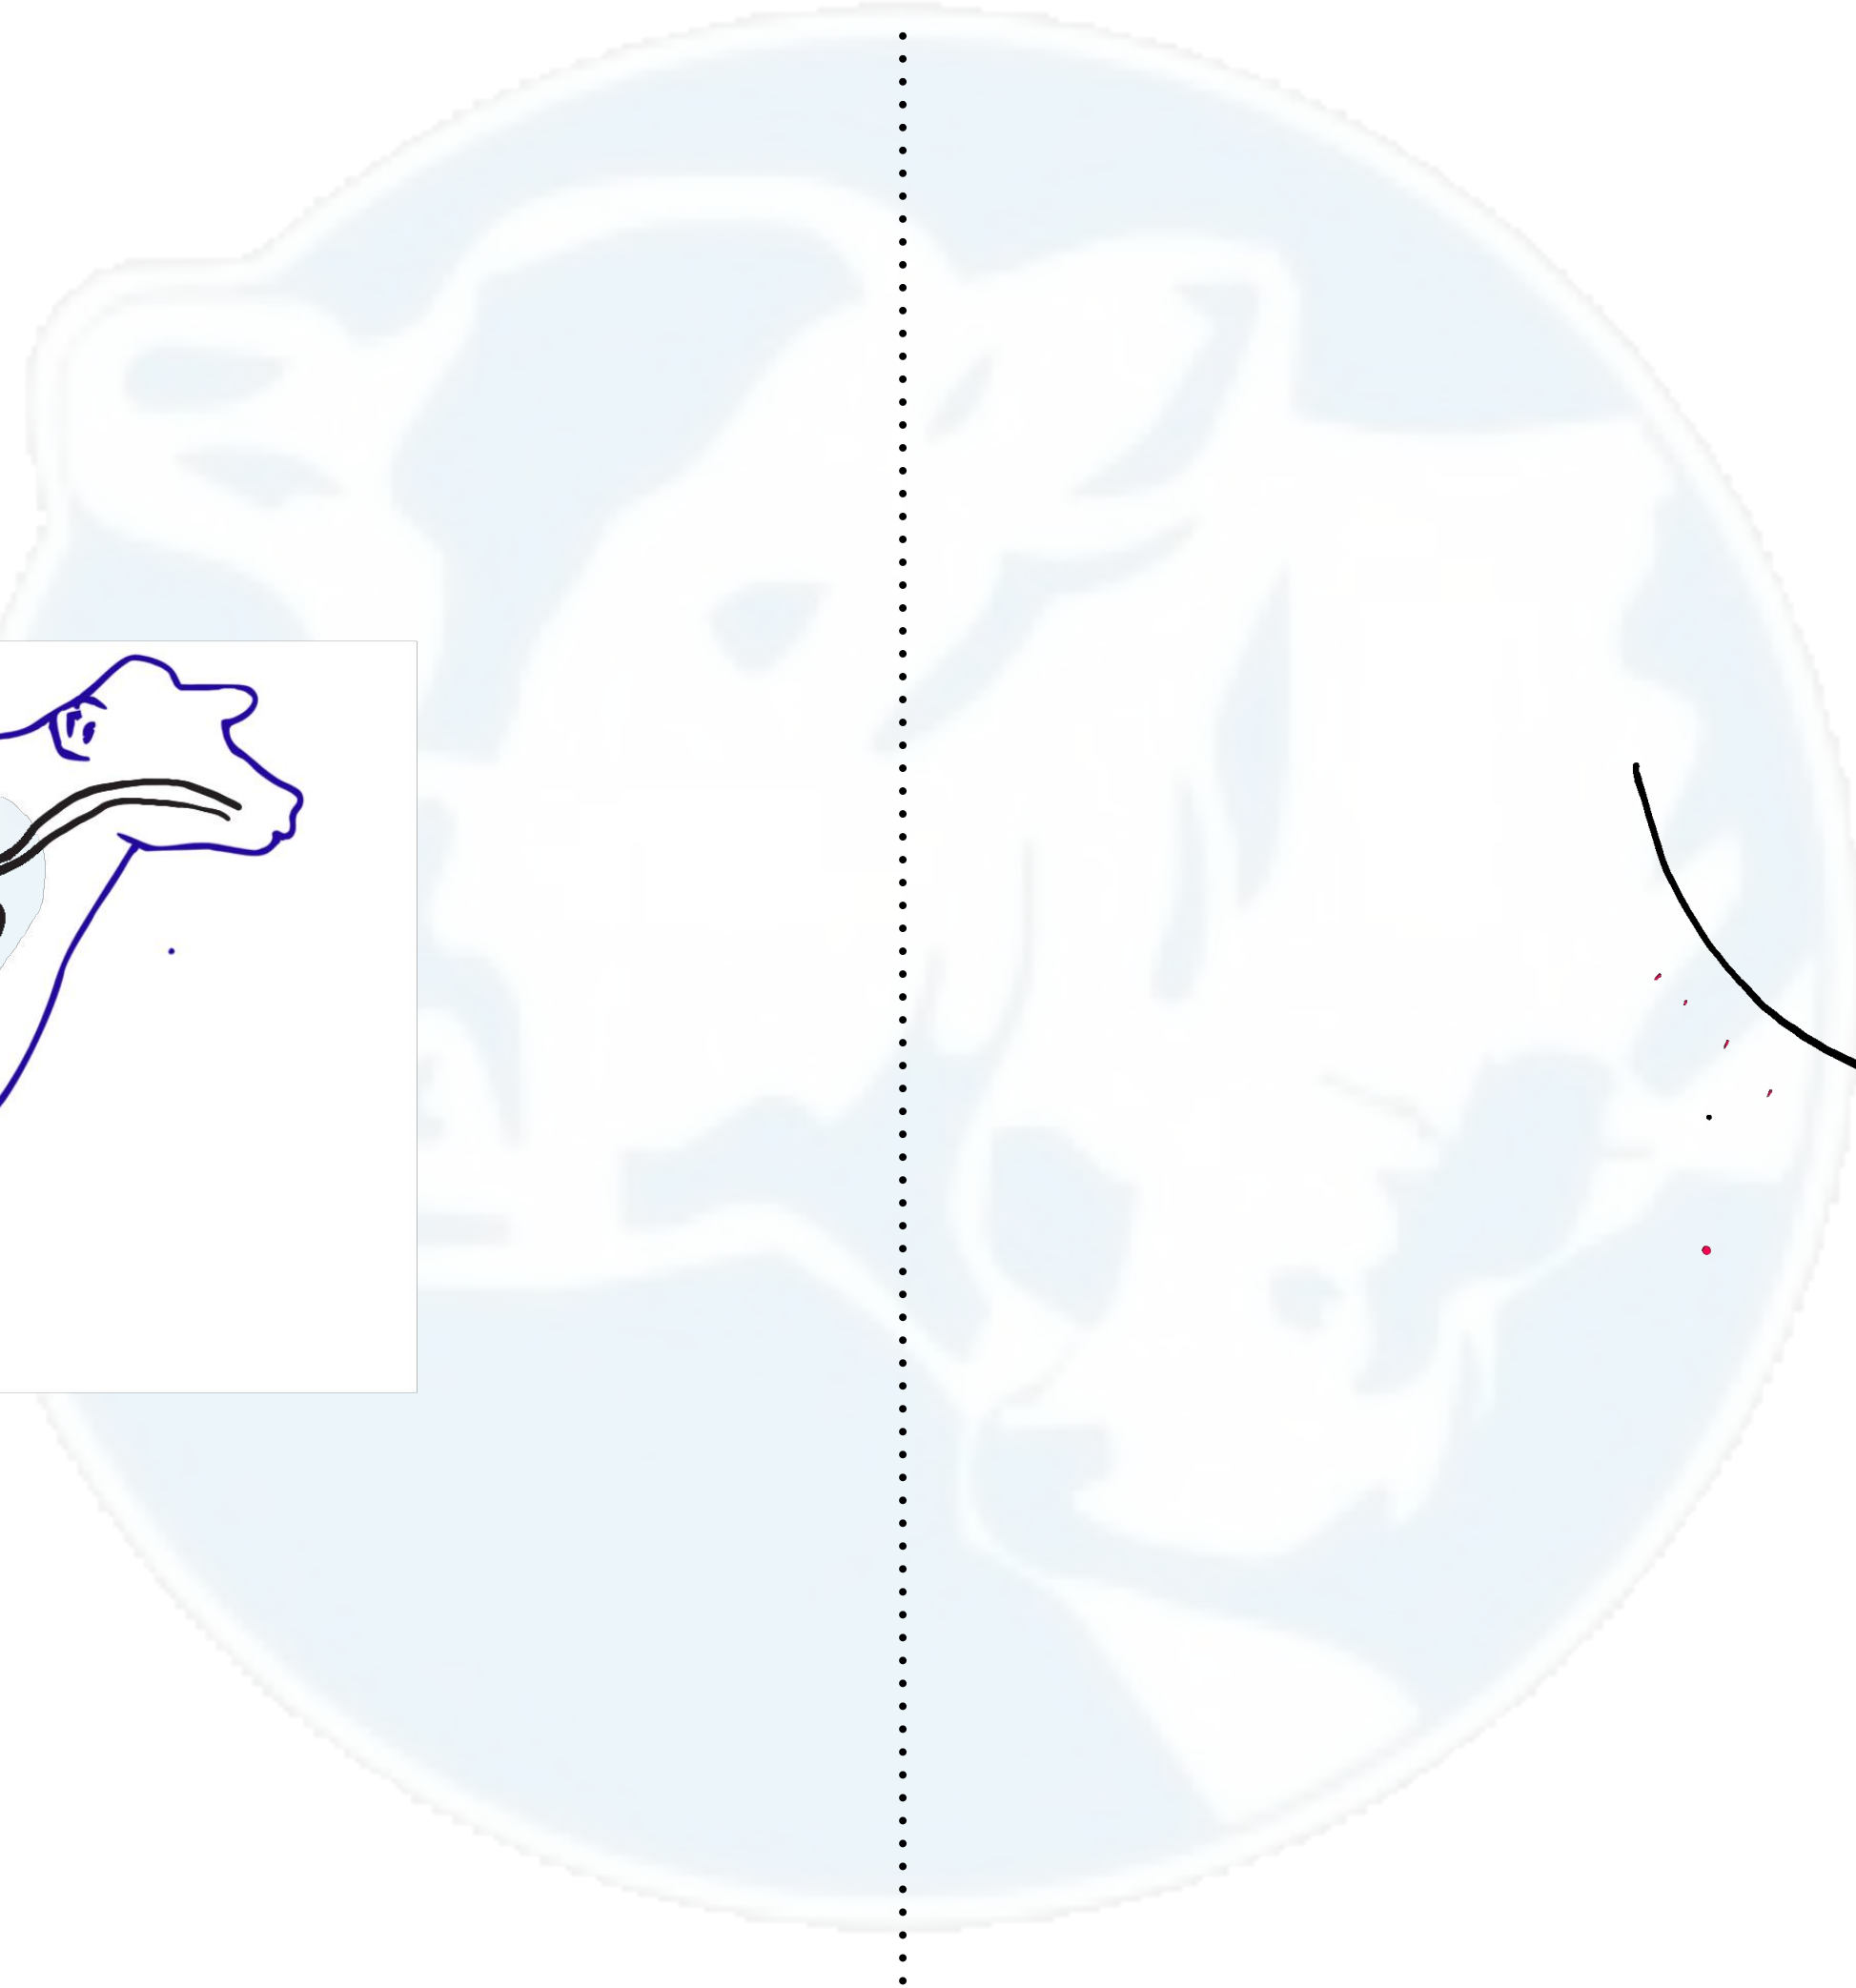

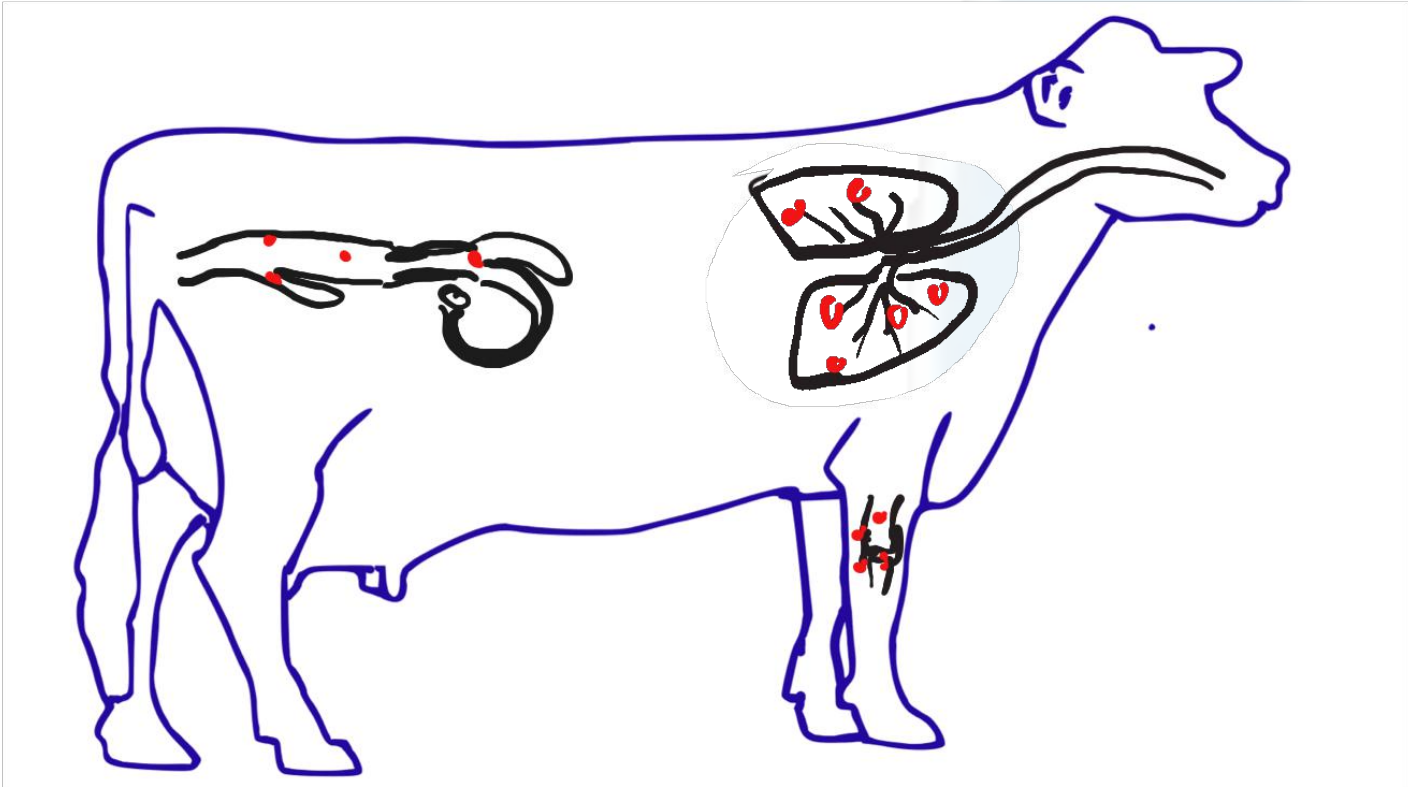

Proper Diagnosis of mastitis is very essential

# Let's differentiated mycoplasma mastitis

# Let's differentiated mycoplasma mastitis & Coliform Mastitis

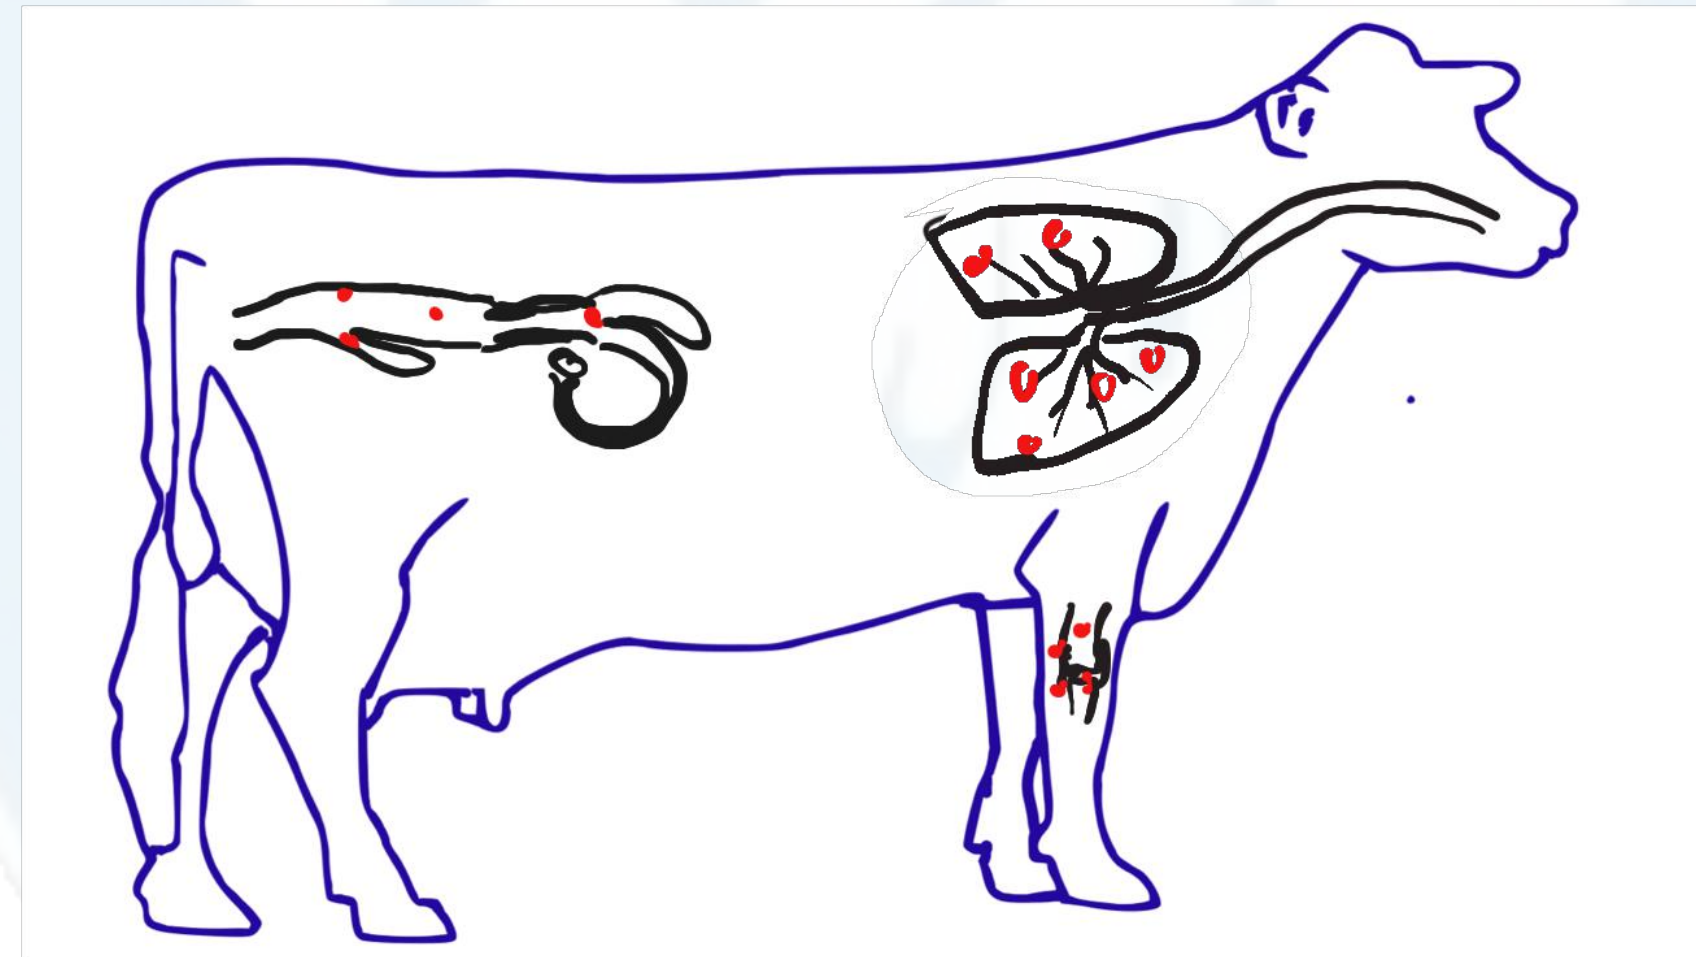

Source / conditions

# Mycoplasma mastitis

Newly introduced  
animal

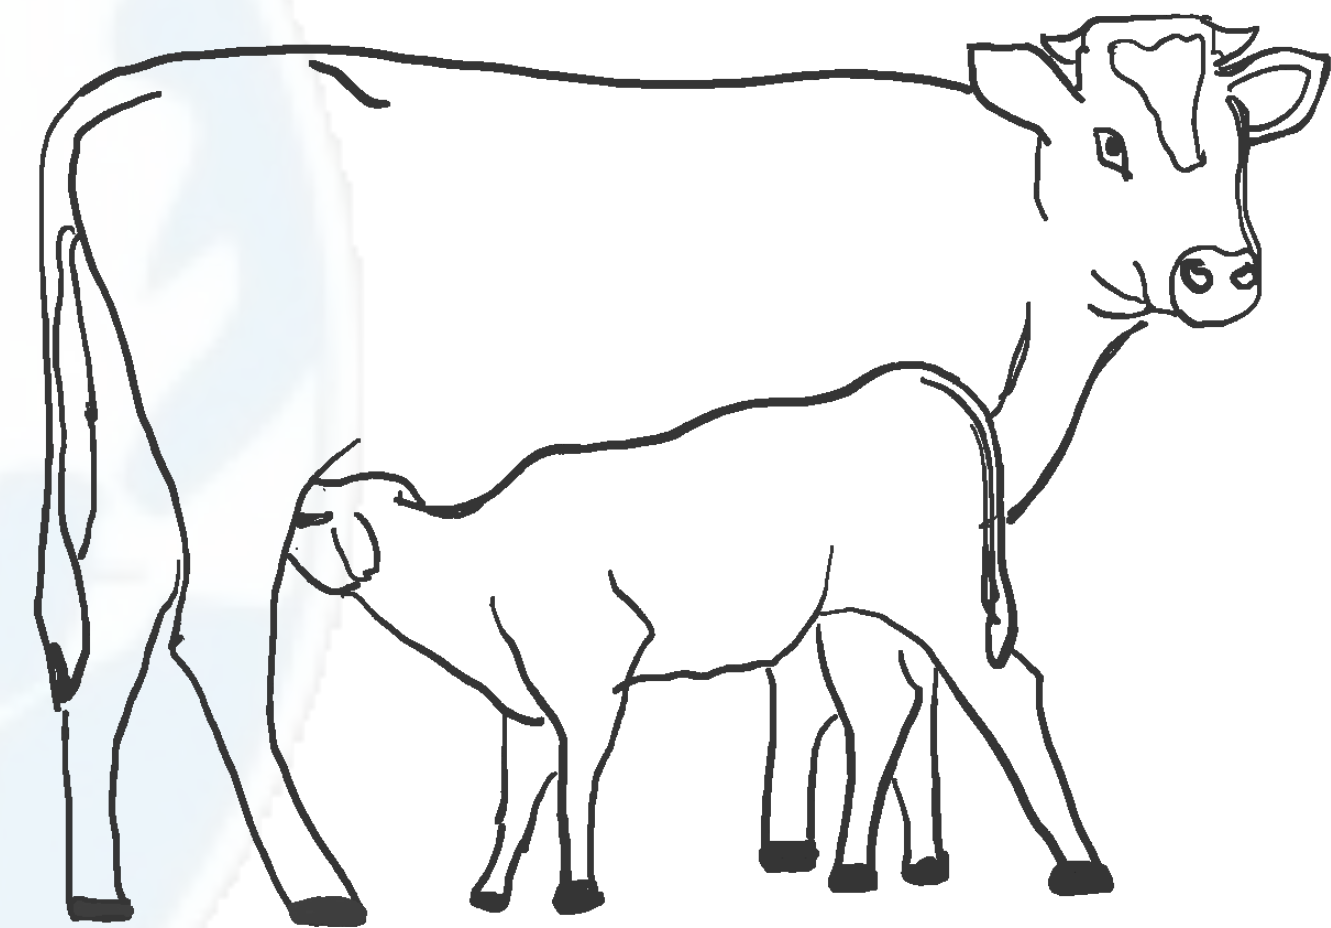

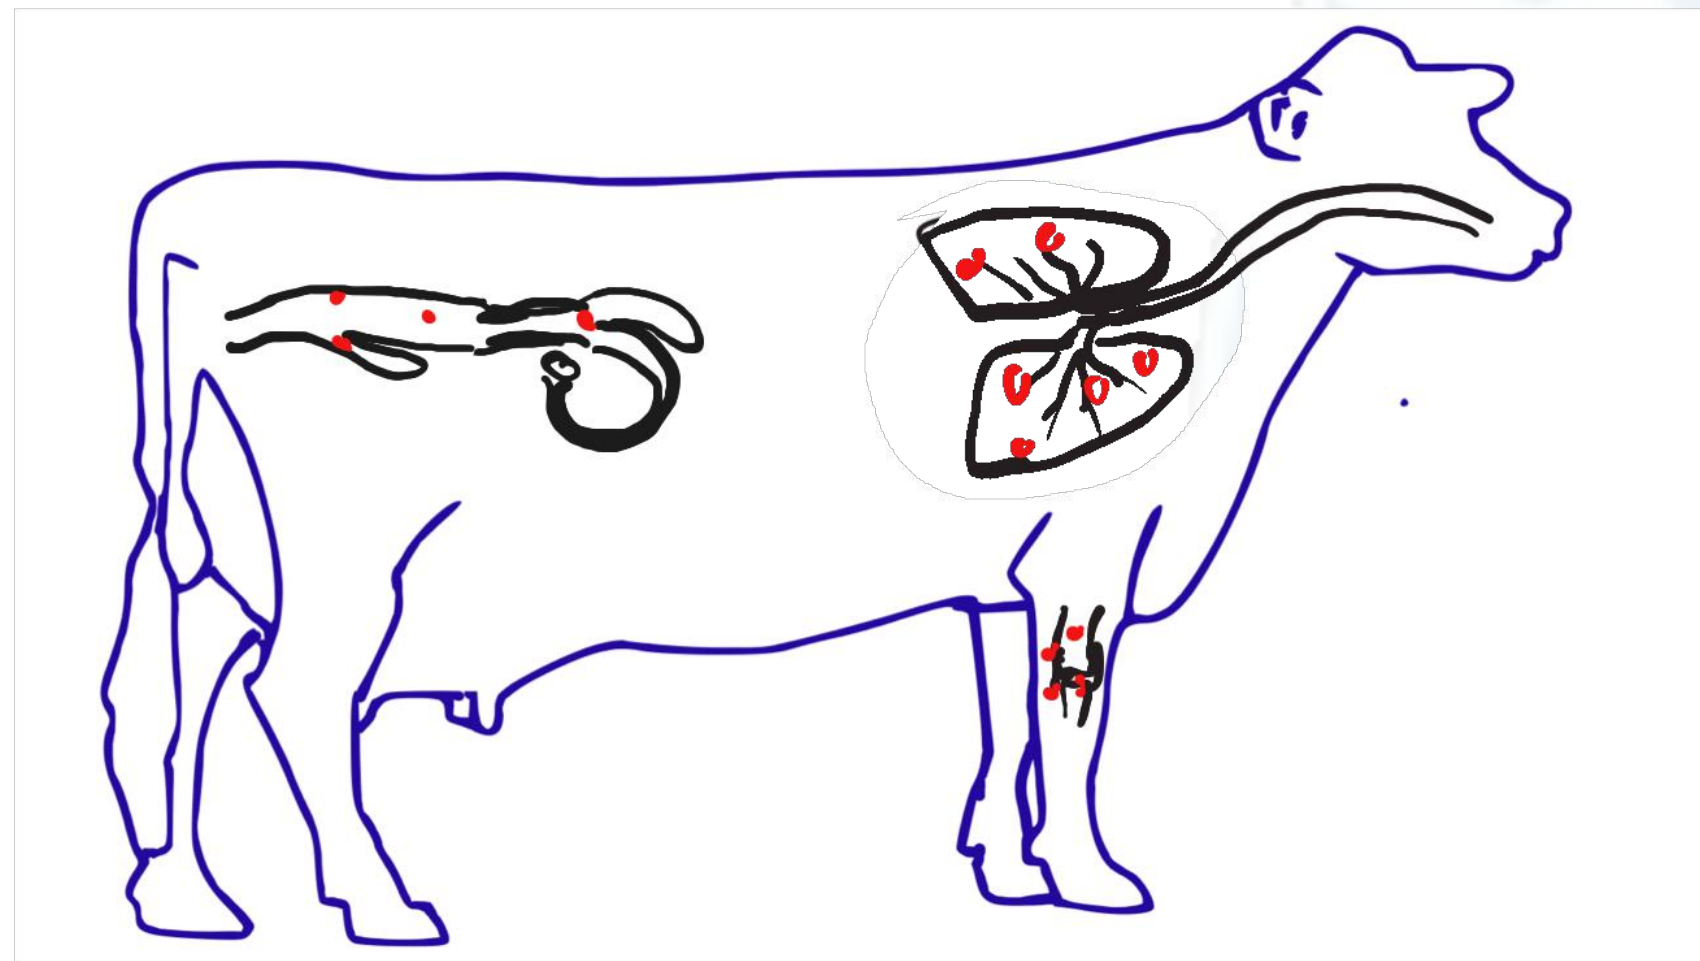

# Mycoplasma Mastitis

Introducing New animals (may have mycoplasma in dormant conditions)

# Mycoplasma Mastitis

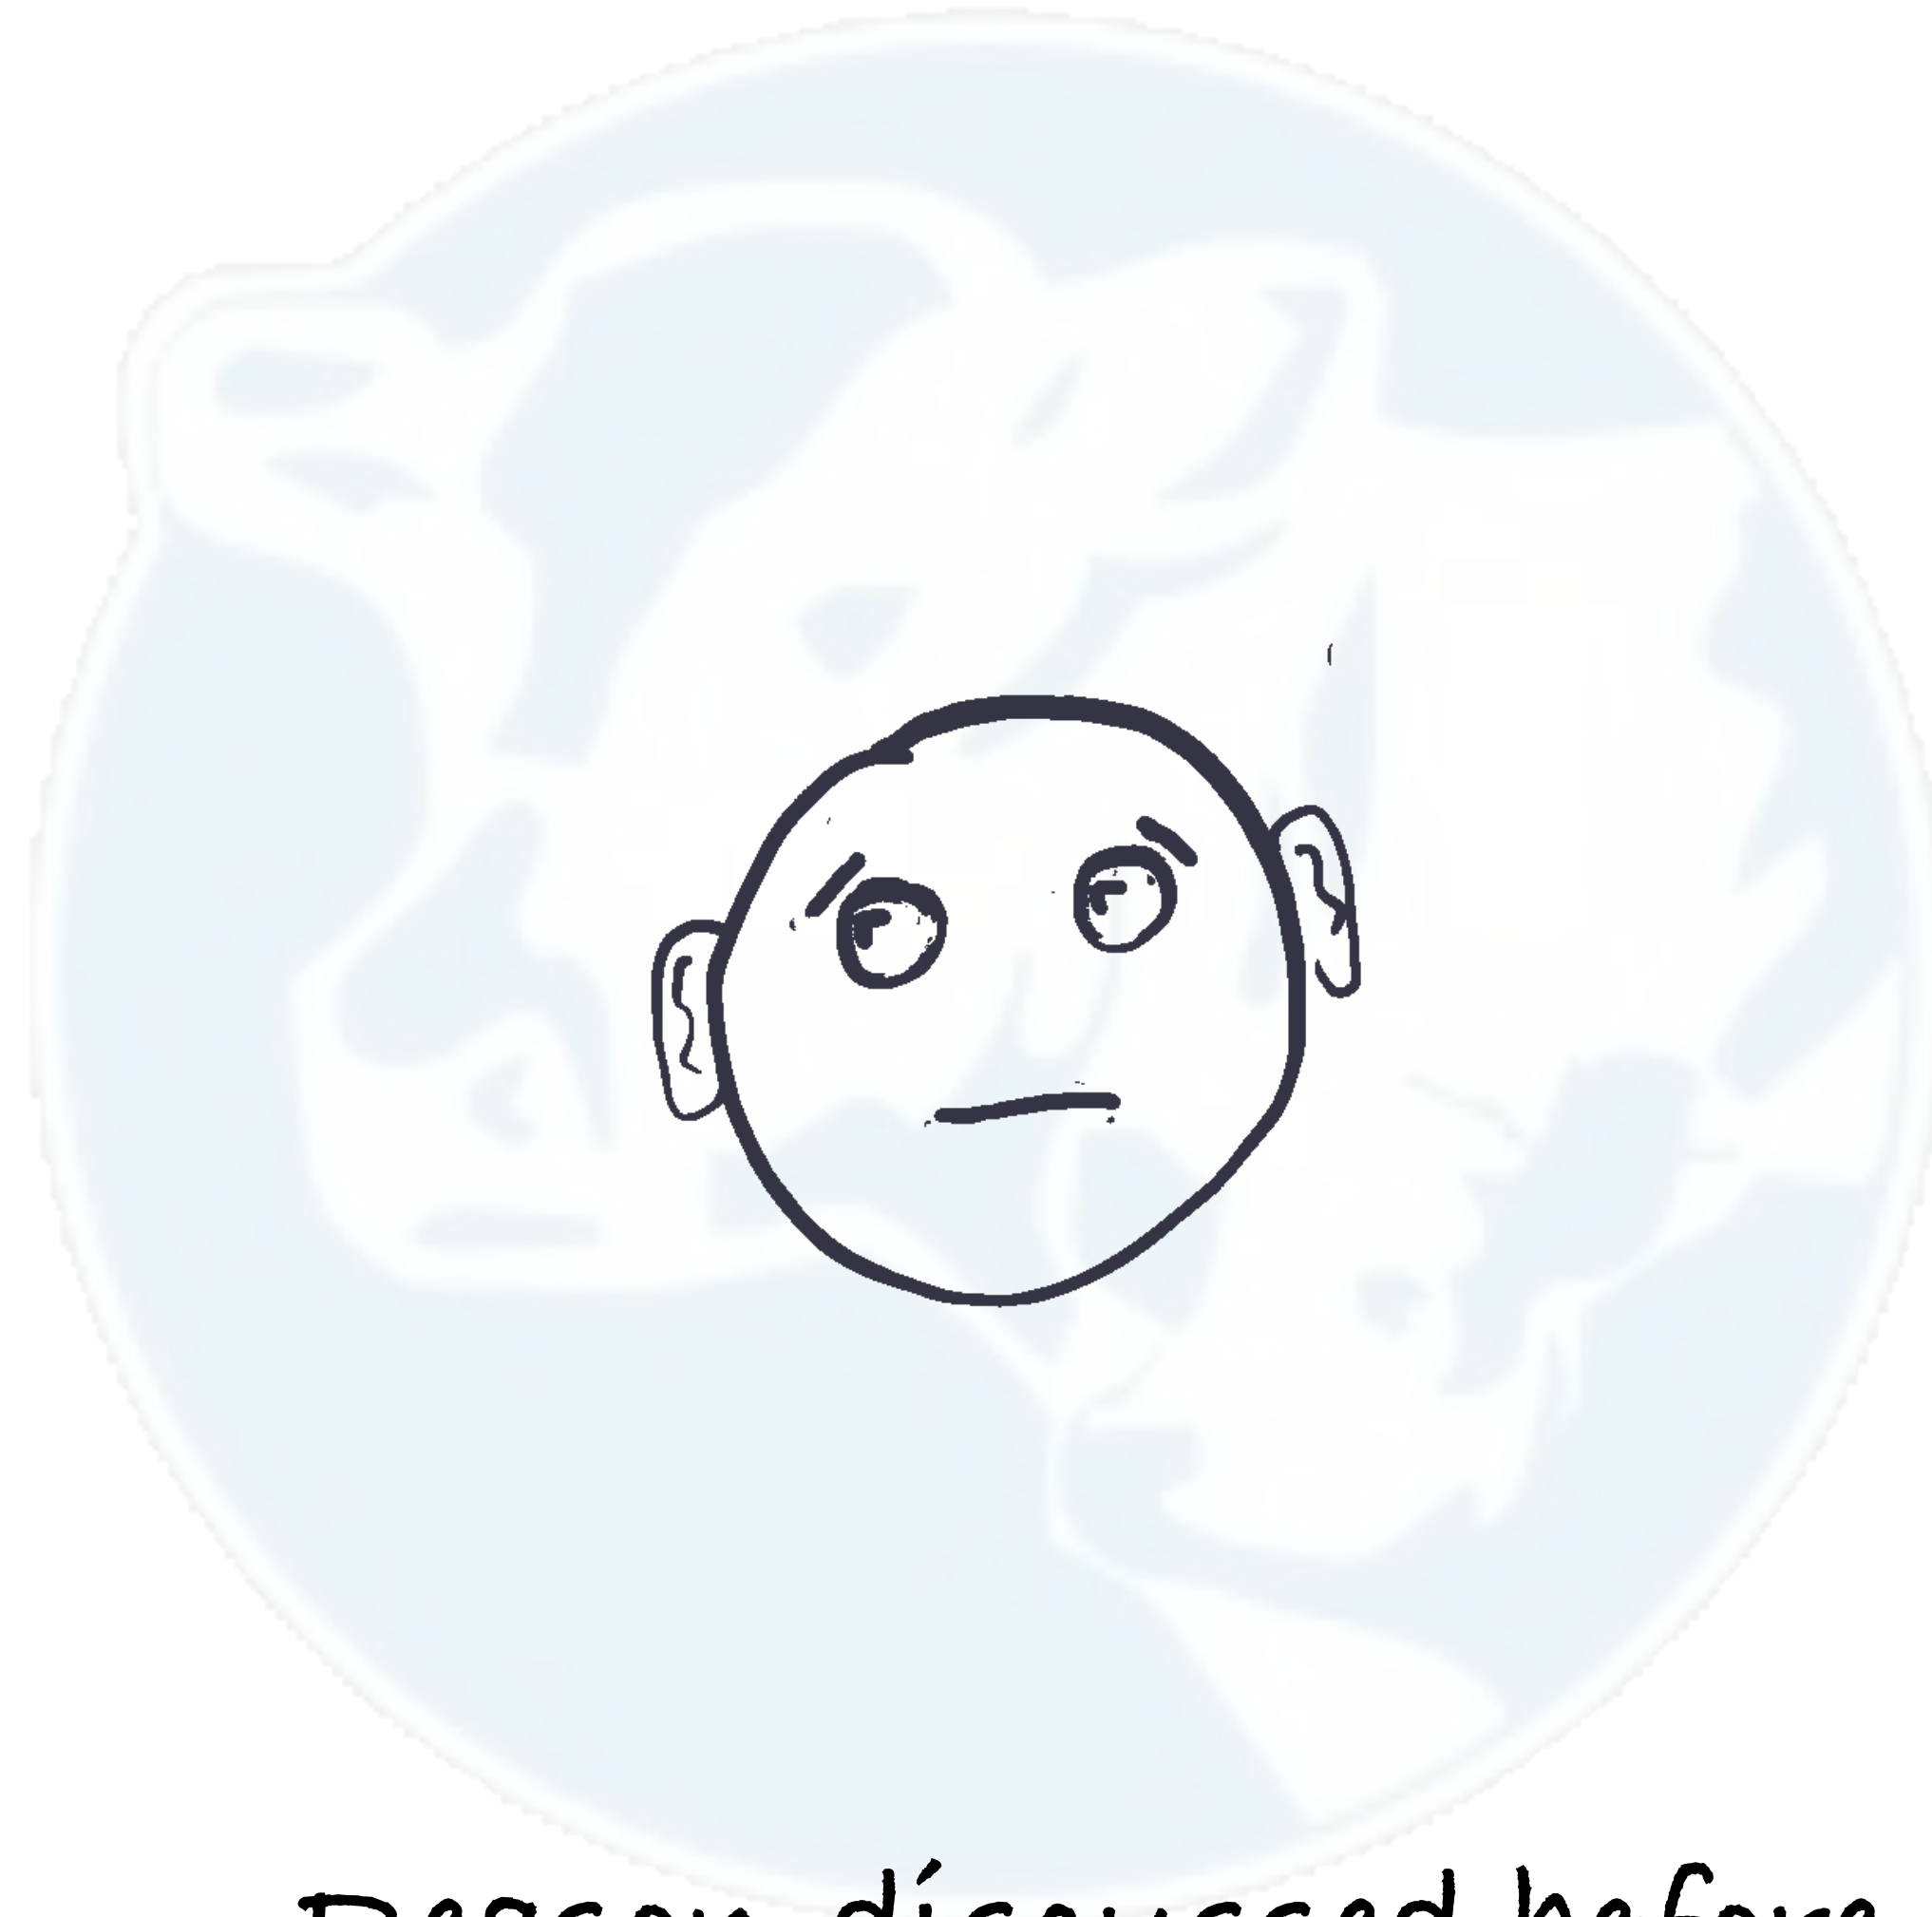

# Coliform Mastitis

Introducing New animals  
(may have mycoplasma  
in dormant conditions)

Near calving period  
(15 days Before/after)

Why ???

Reason discussed before

changes in udder

# Mycoplasma mastitis

slight hardness, very low pain

(shrinking of teat)

# Mycoplasma mastitis

Slight hardness, very low pain

(shrinking of teat)

# Coliform Mastitis

Soft/Oedematous swelling

Lesser painful

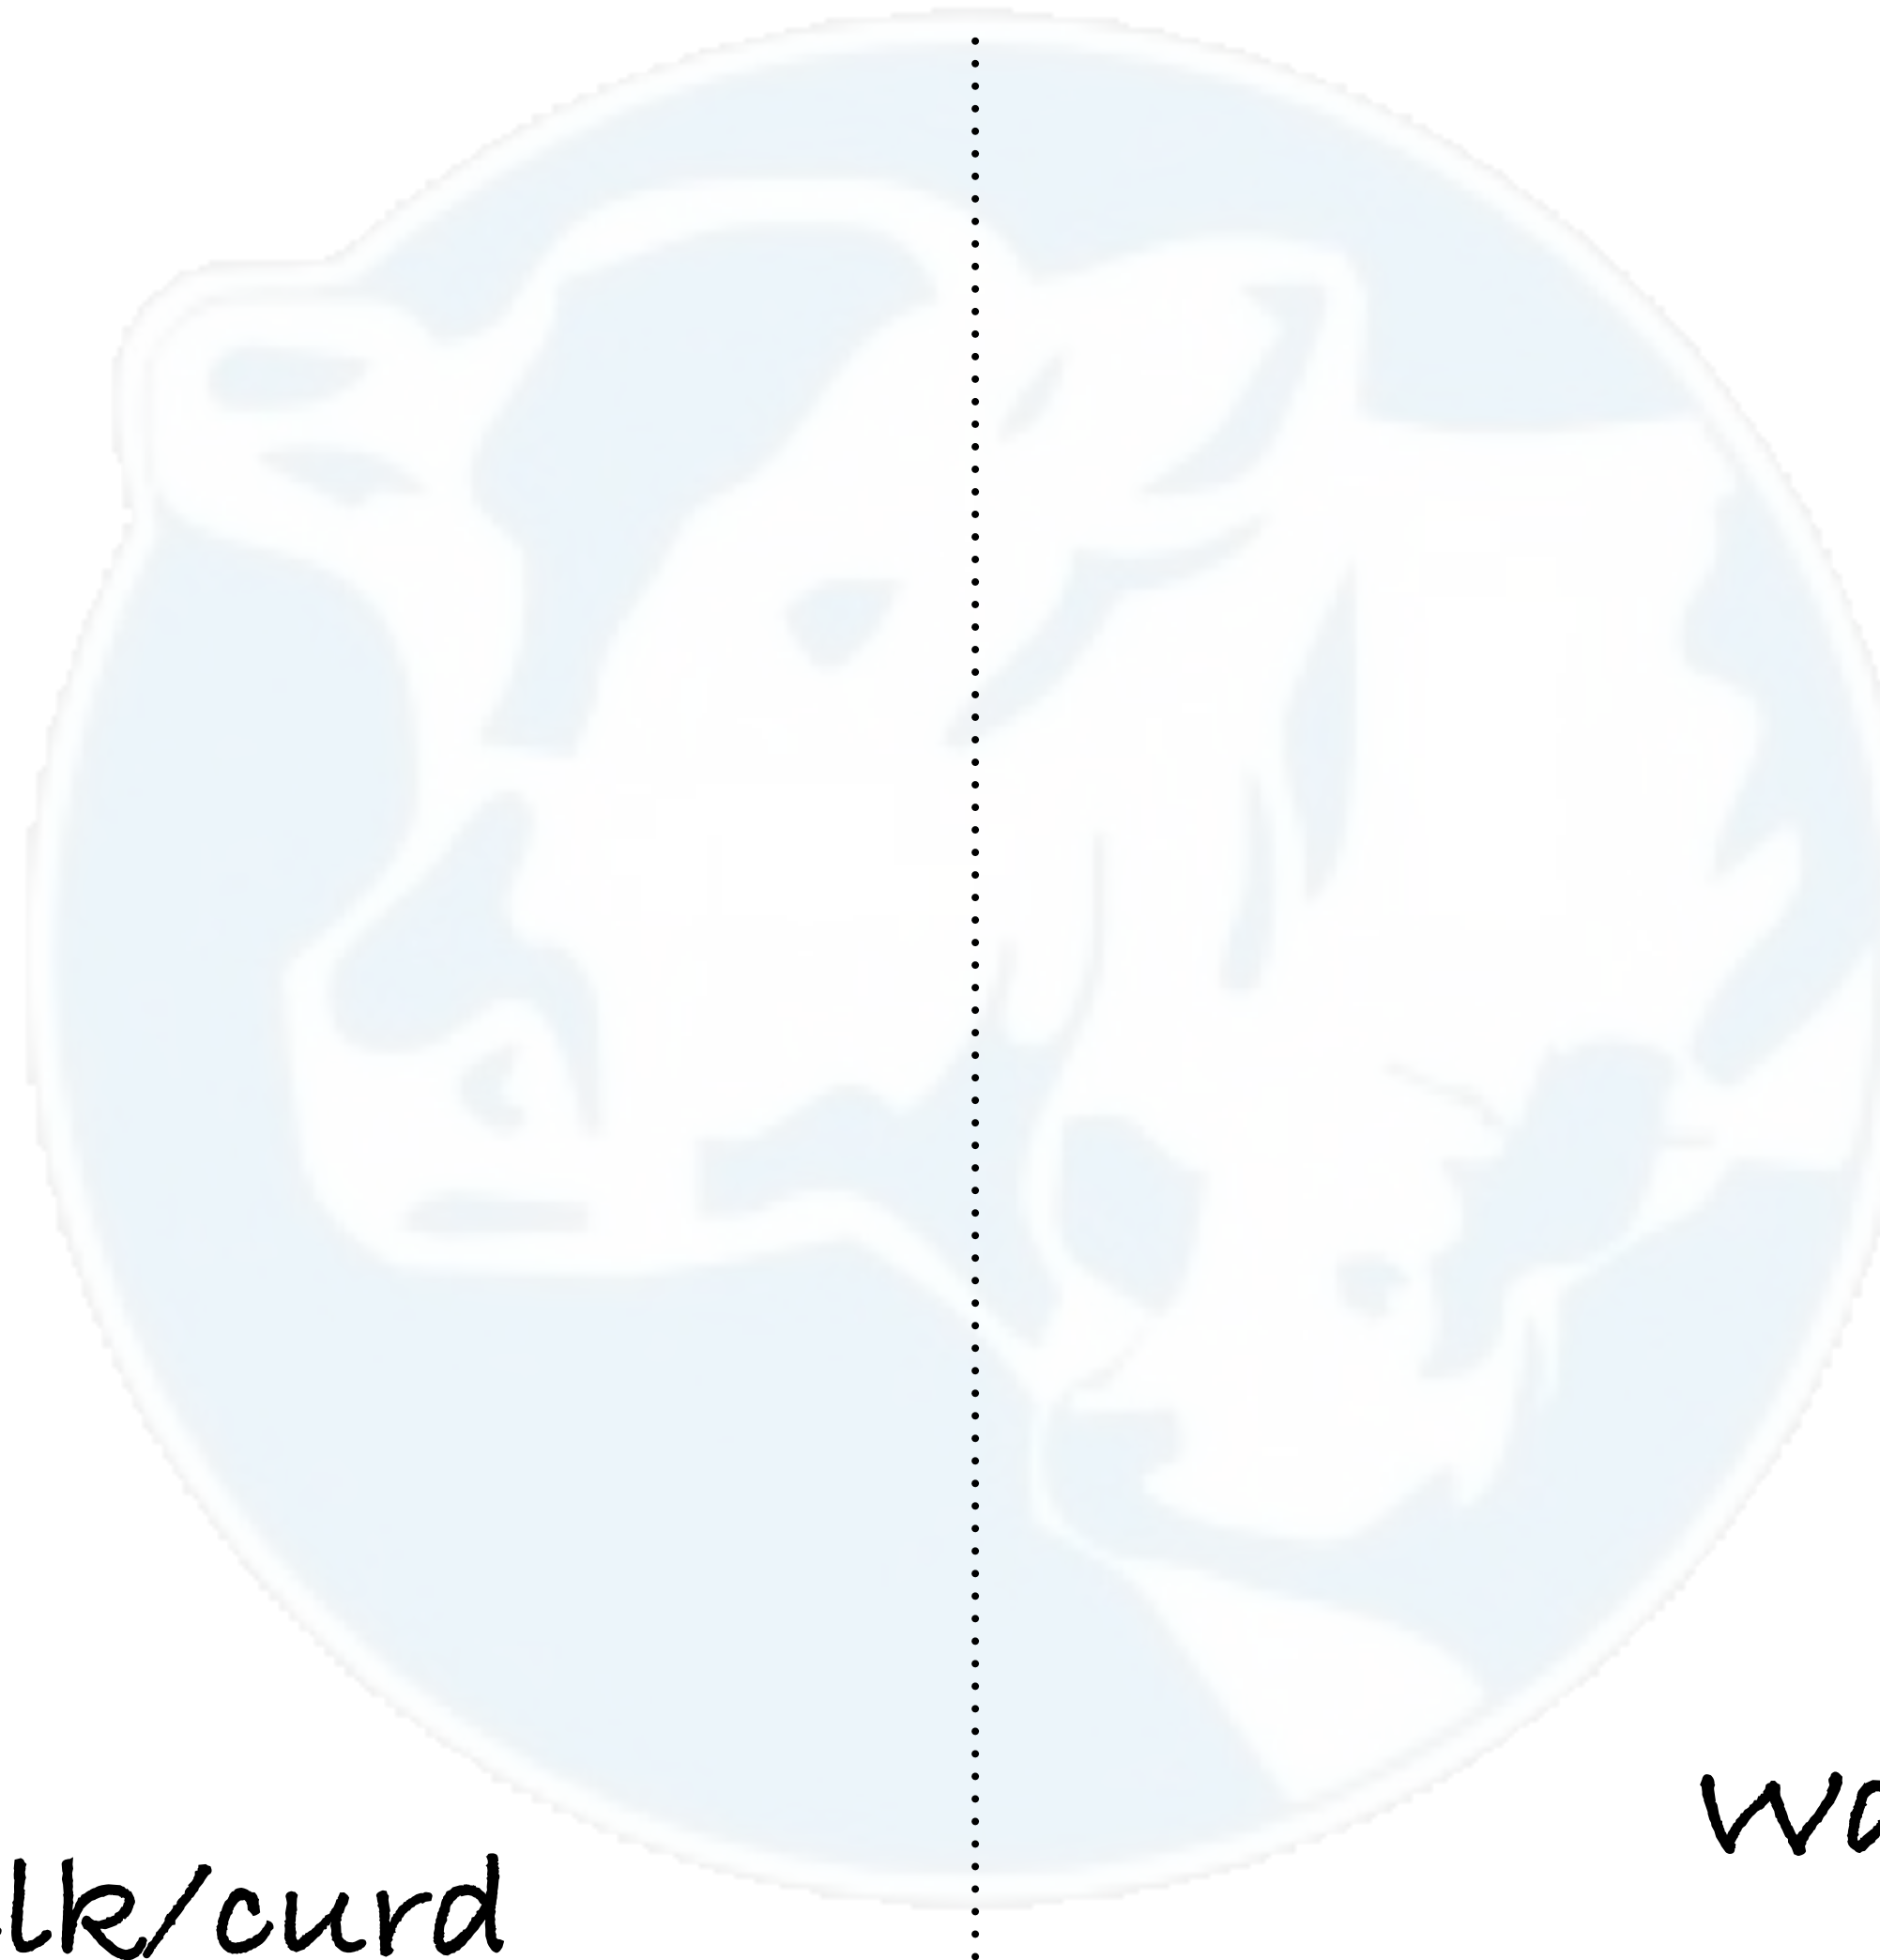

Udder Secretion (Change in Milk)

# Mycoplasma mastitis

# Coliform Mastitis

Like better milk/curd

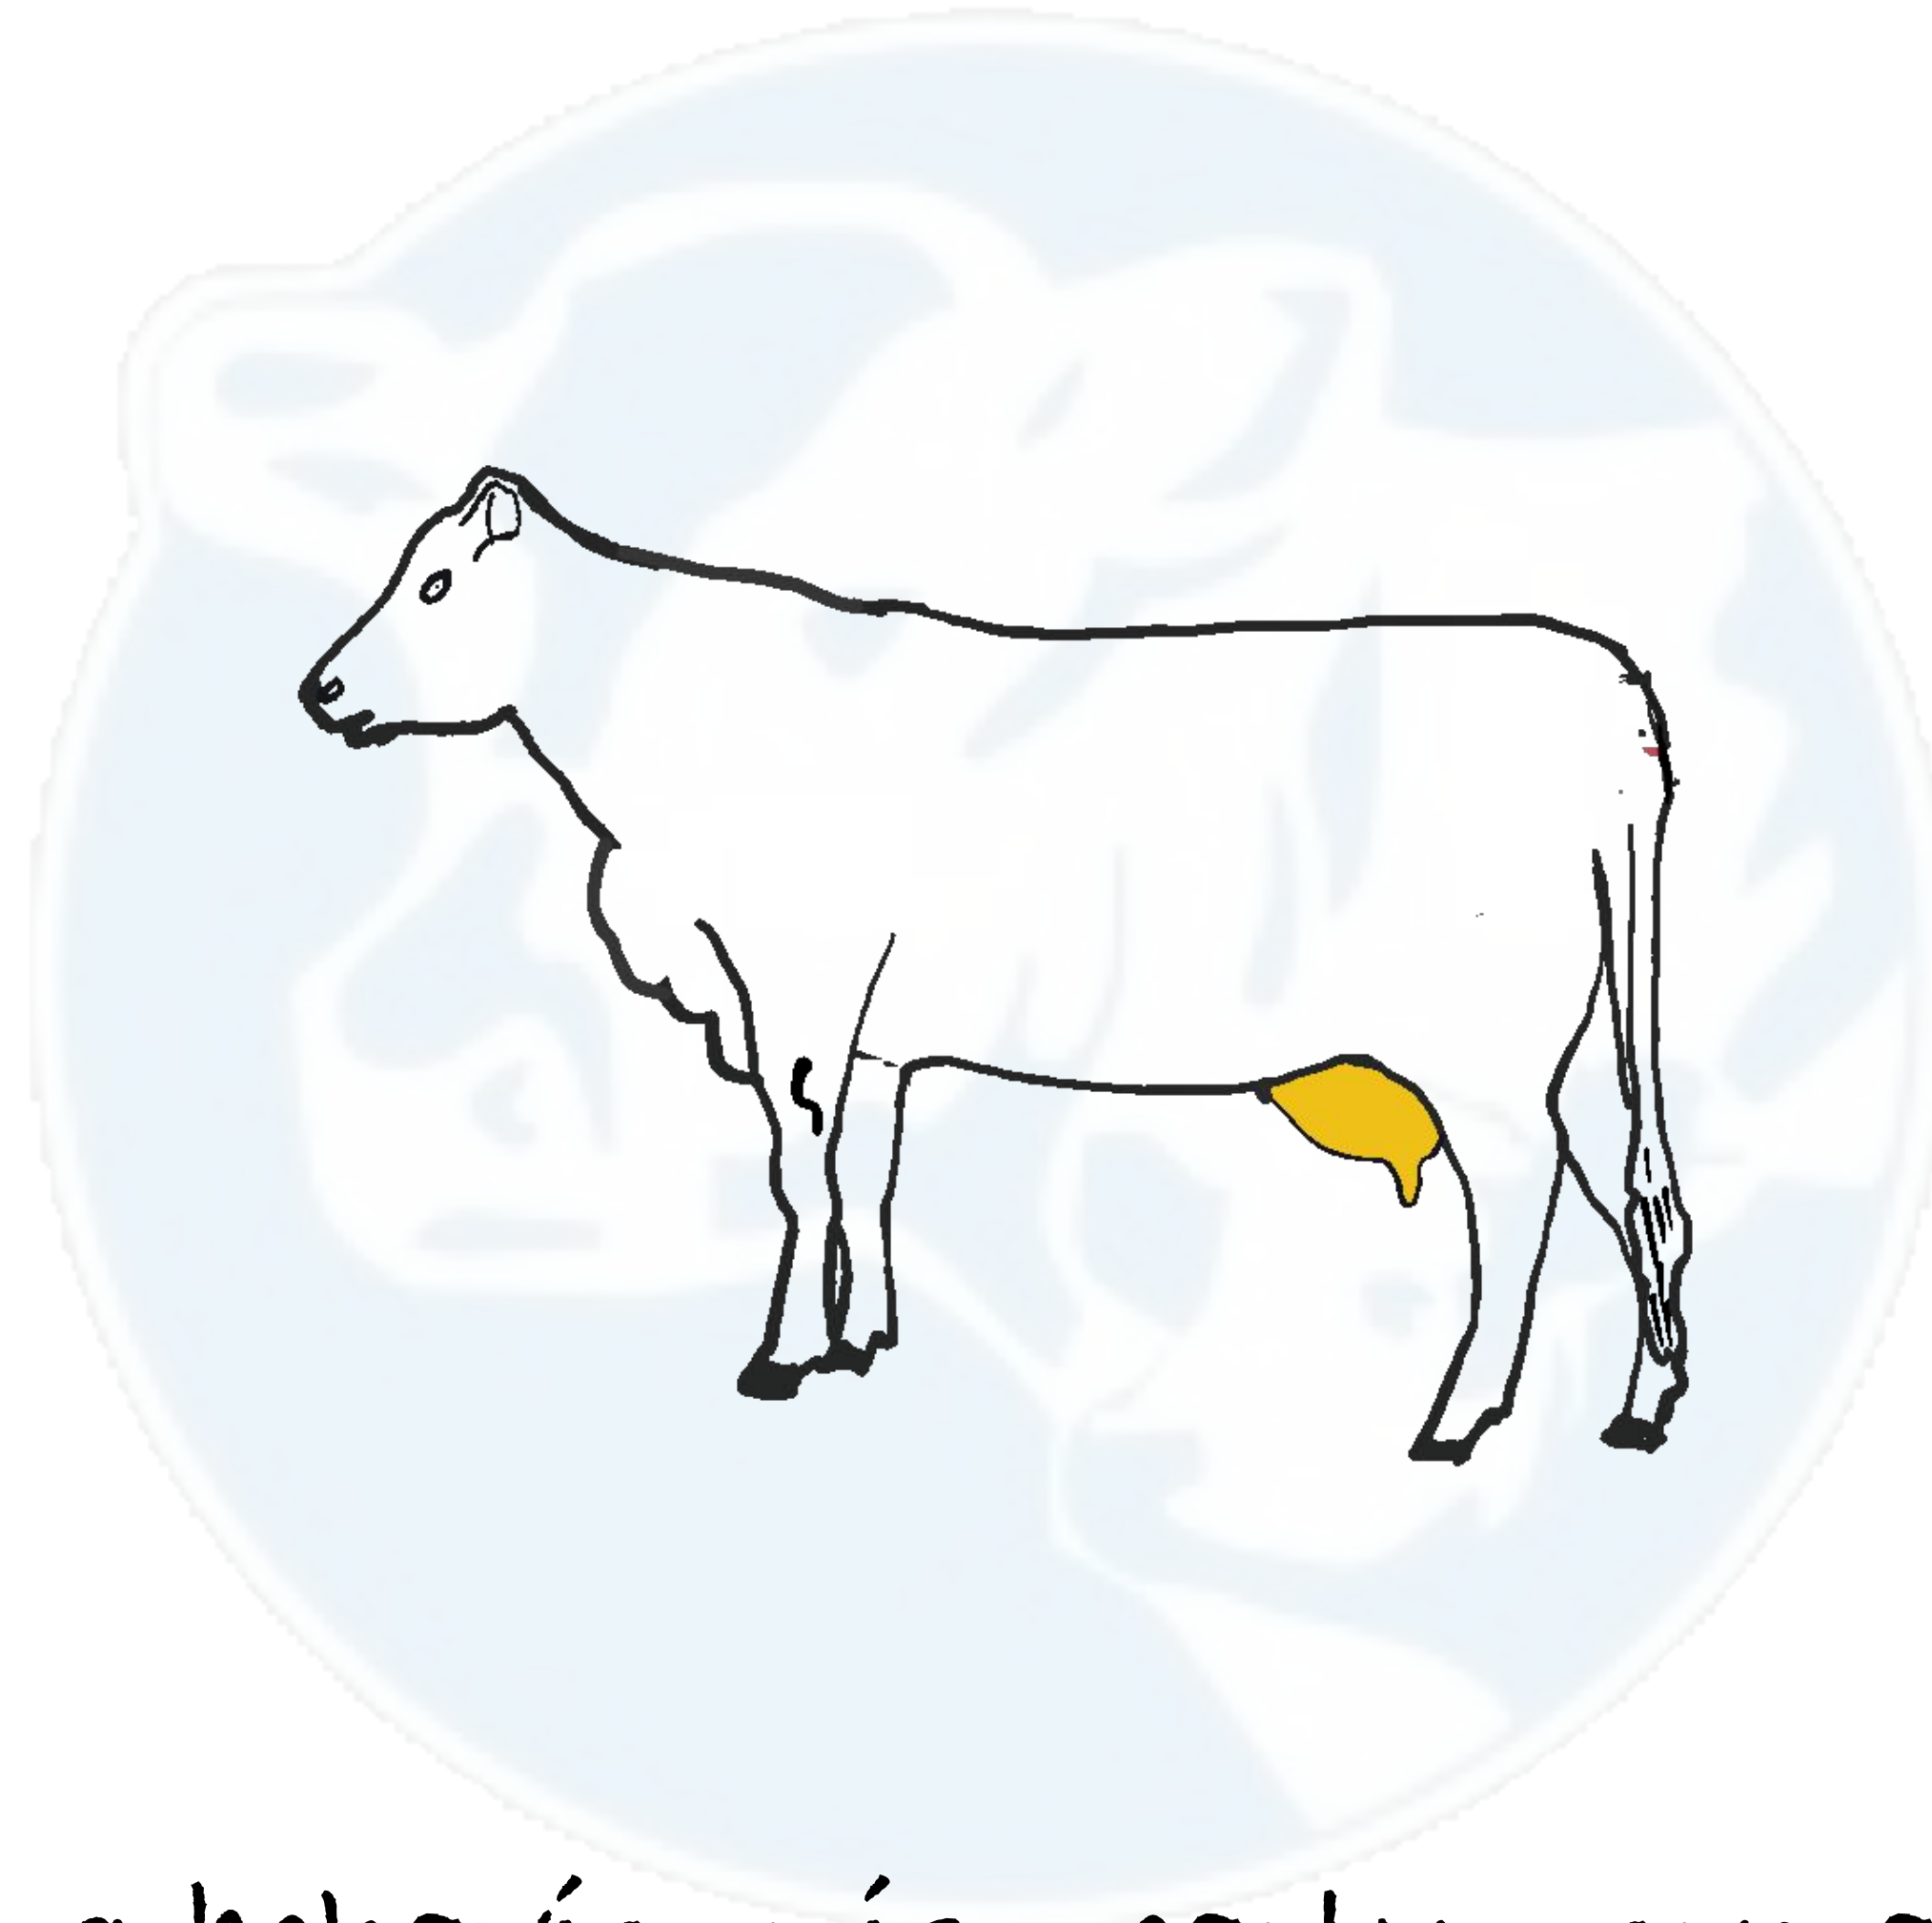

watery/blood clot

Systemic symptoms

# Mycoplasma mastitis

Feeding behaviour is nearly normal but...

# Sudden drop in milk production in Mycoplasma mastitis

Yesterday (20 Lt.)

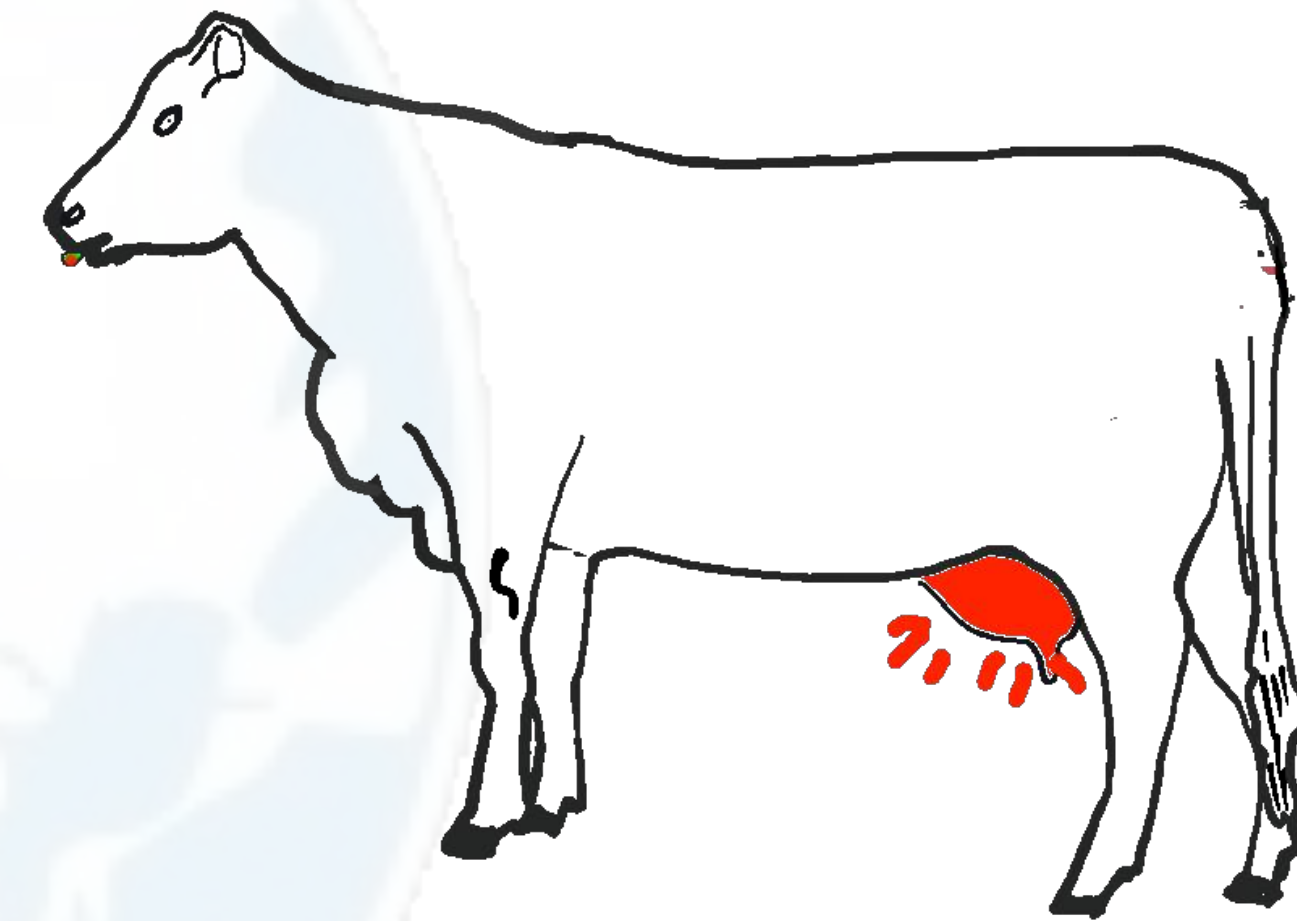

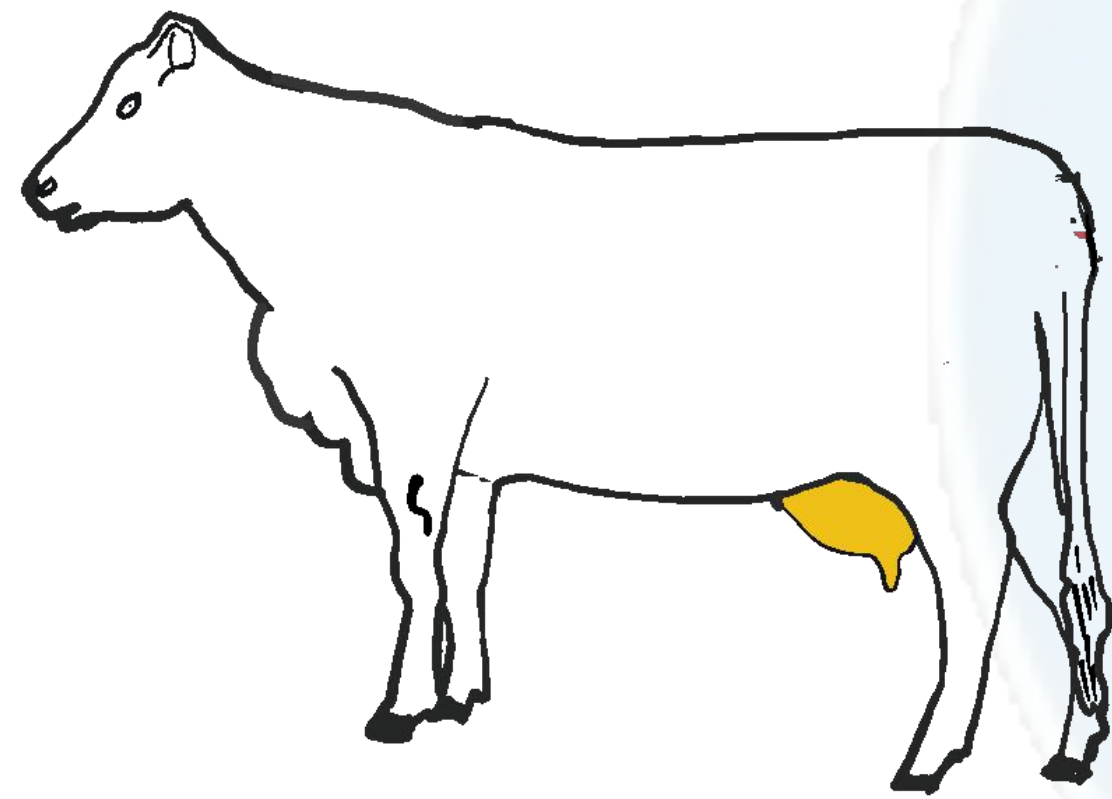

Today Only (Only 2 Lt.)

# Mycoplasma mastitis

# Coliform Mastitis

Feeding behaviour is nearly normal

Due to toxæmia  
(high fever, shock, may die)

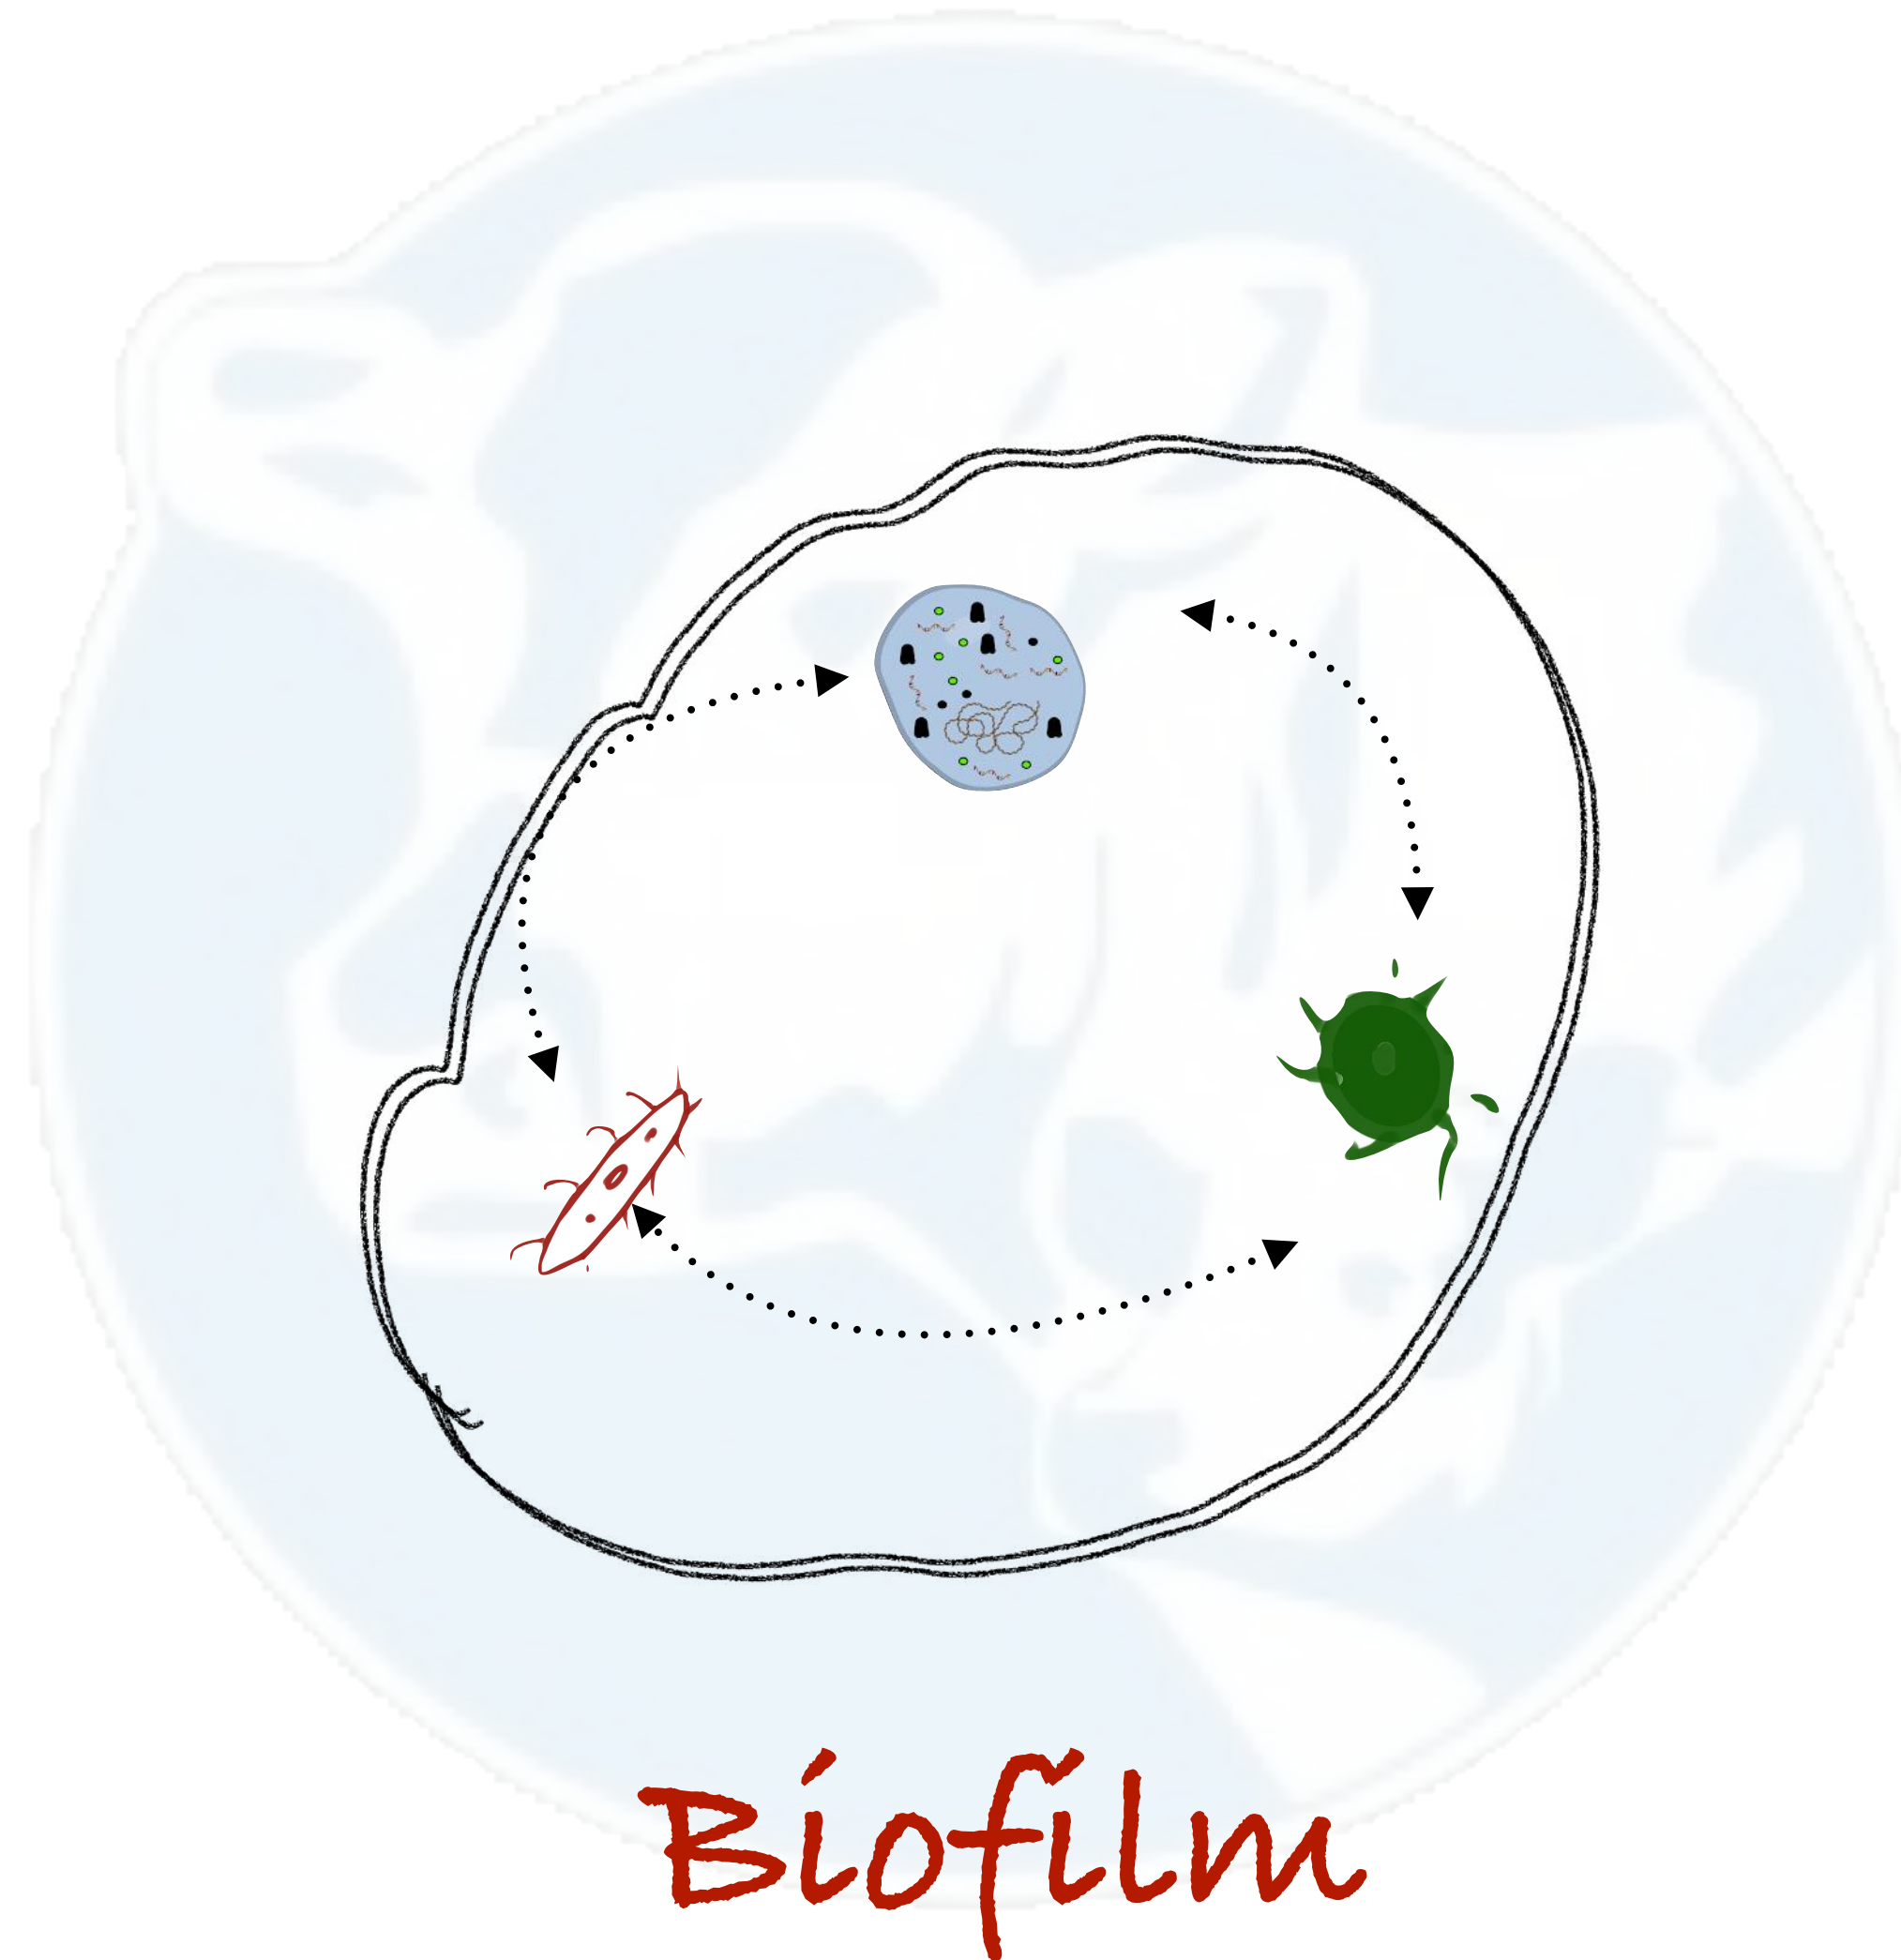

Line of treatment

# Mycoplasma Mastitis

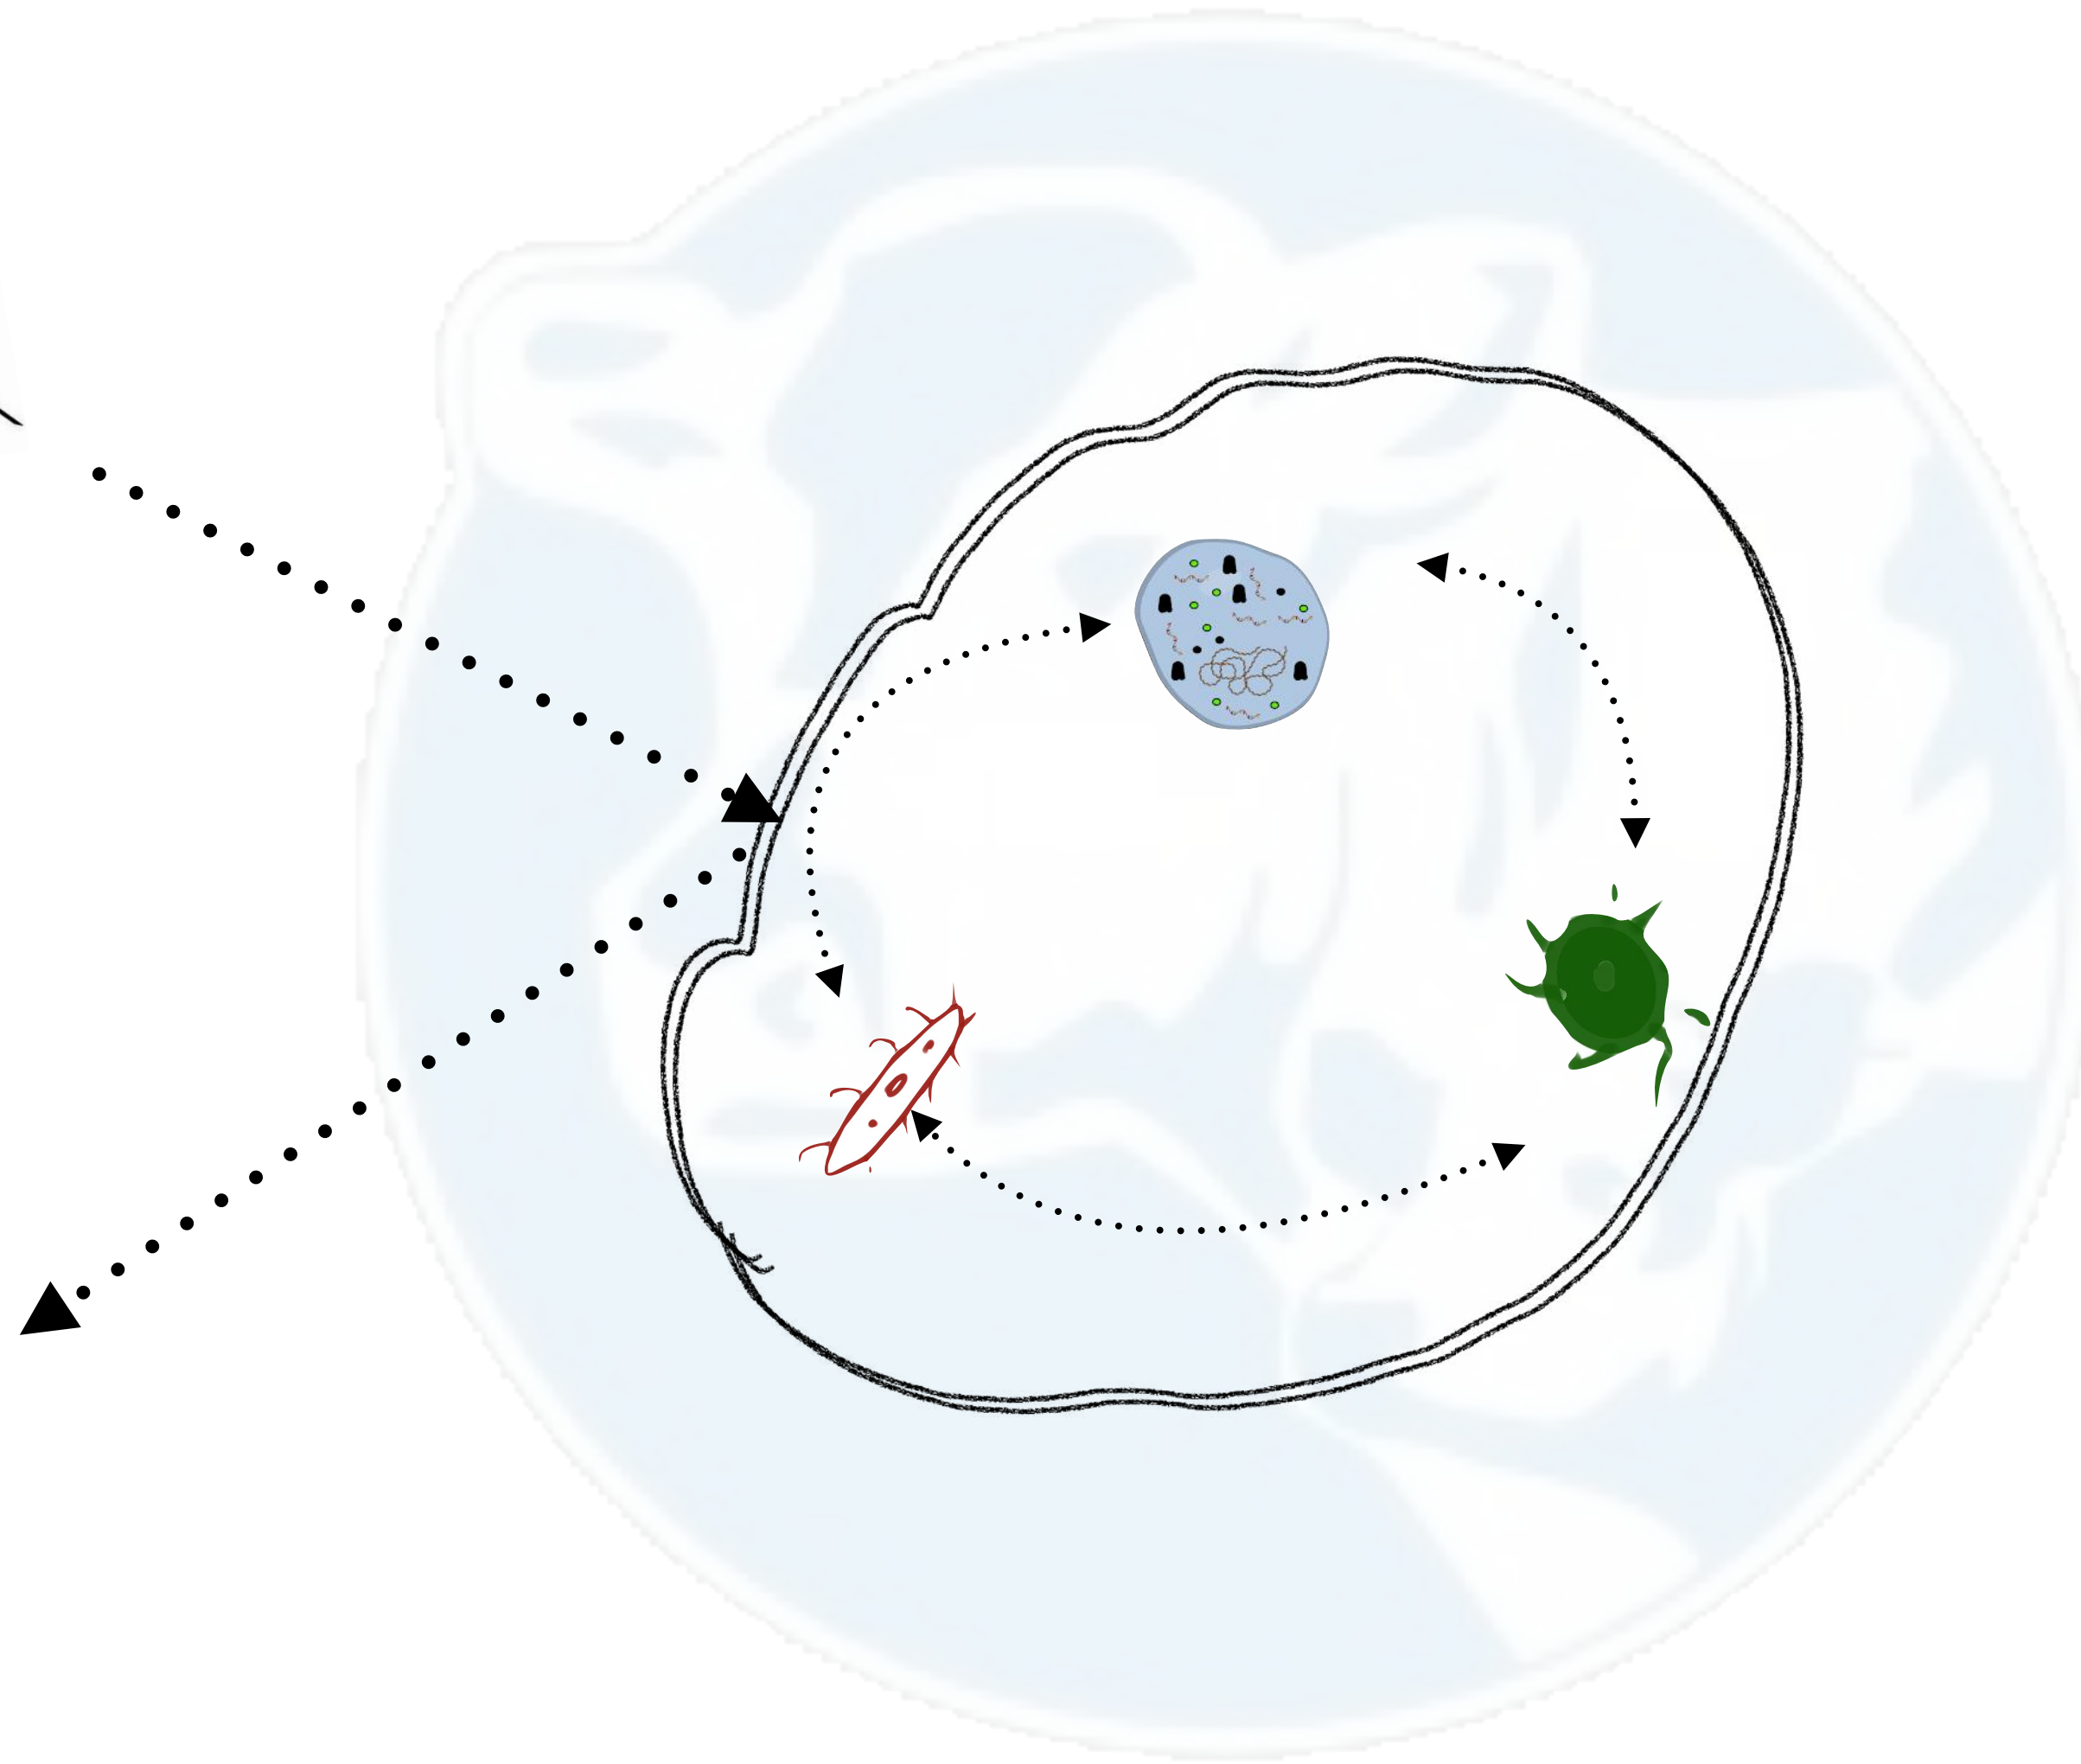

Most difficult to treat ..

The main reason is biofilm

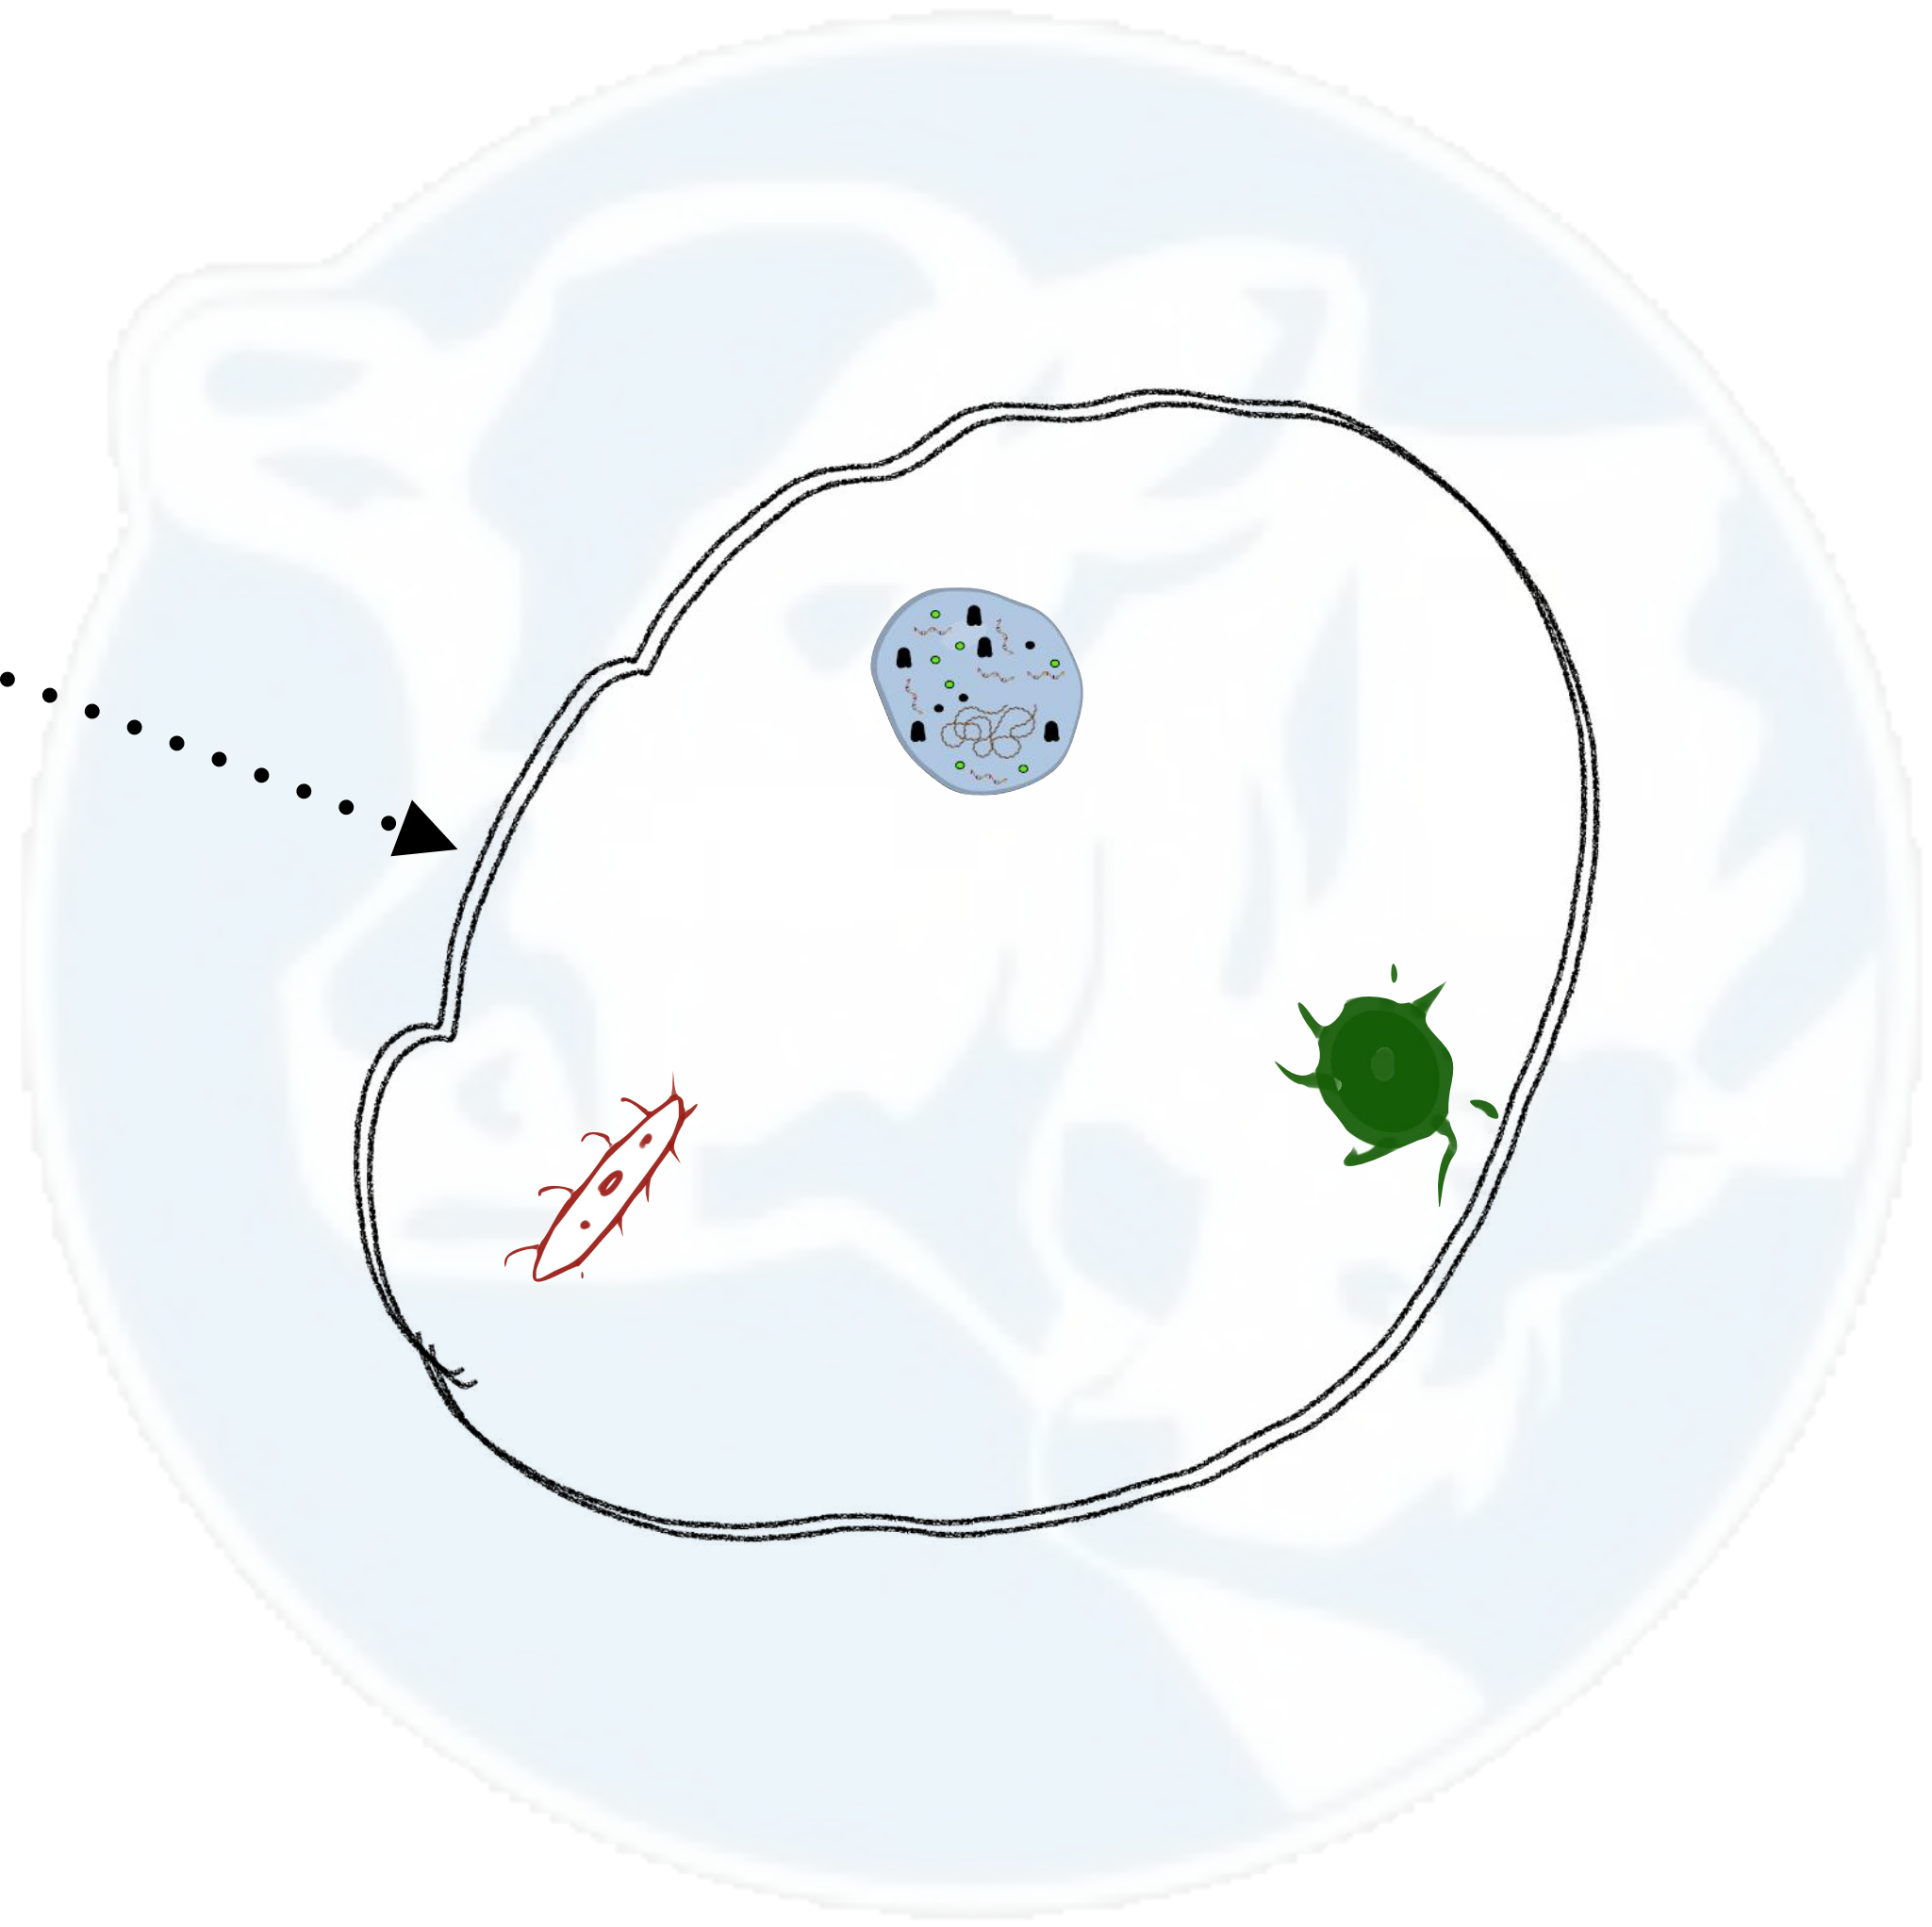

# Makes Antibiotic ineffective

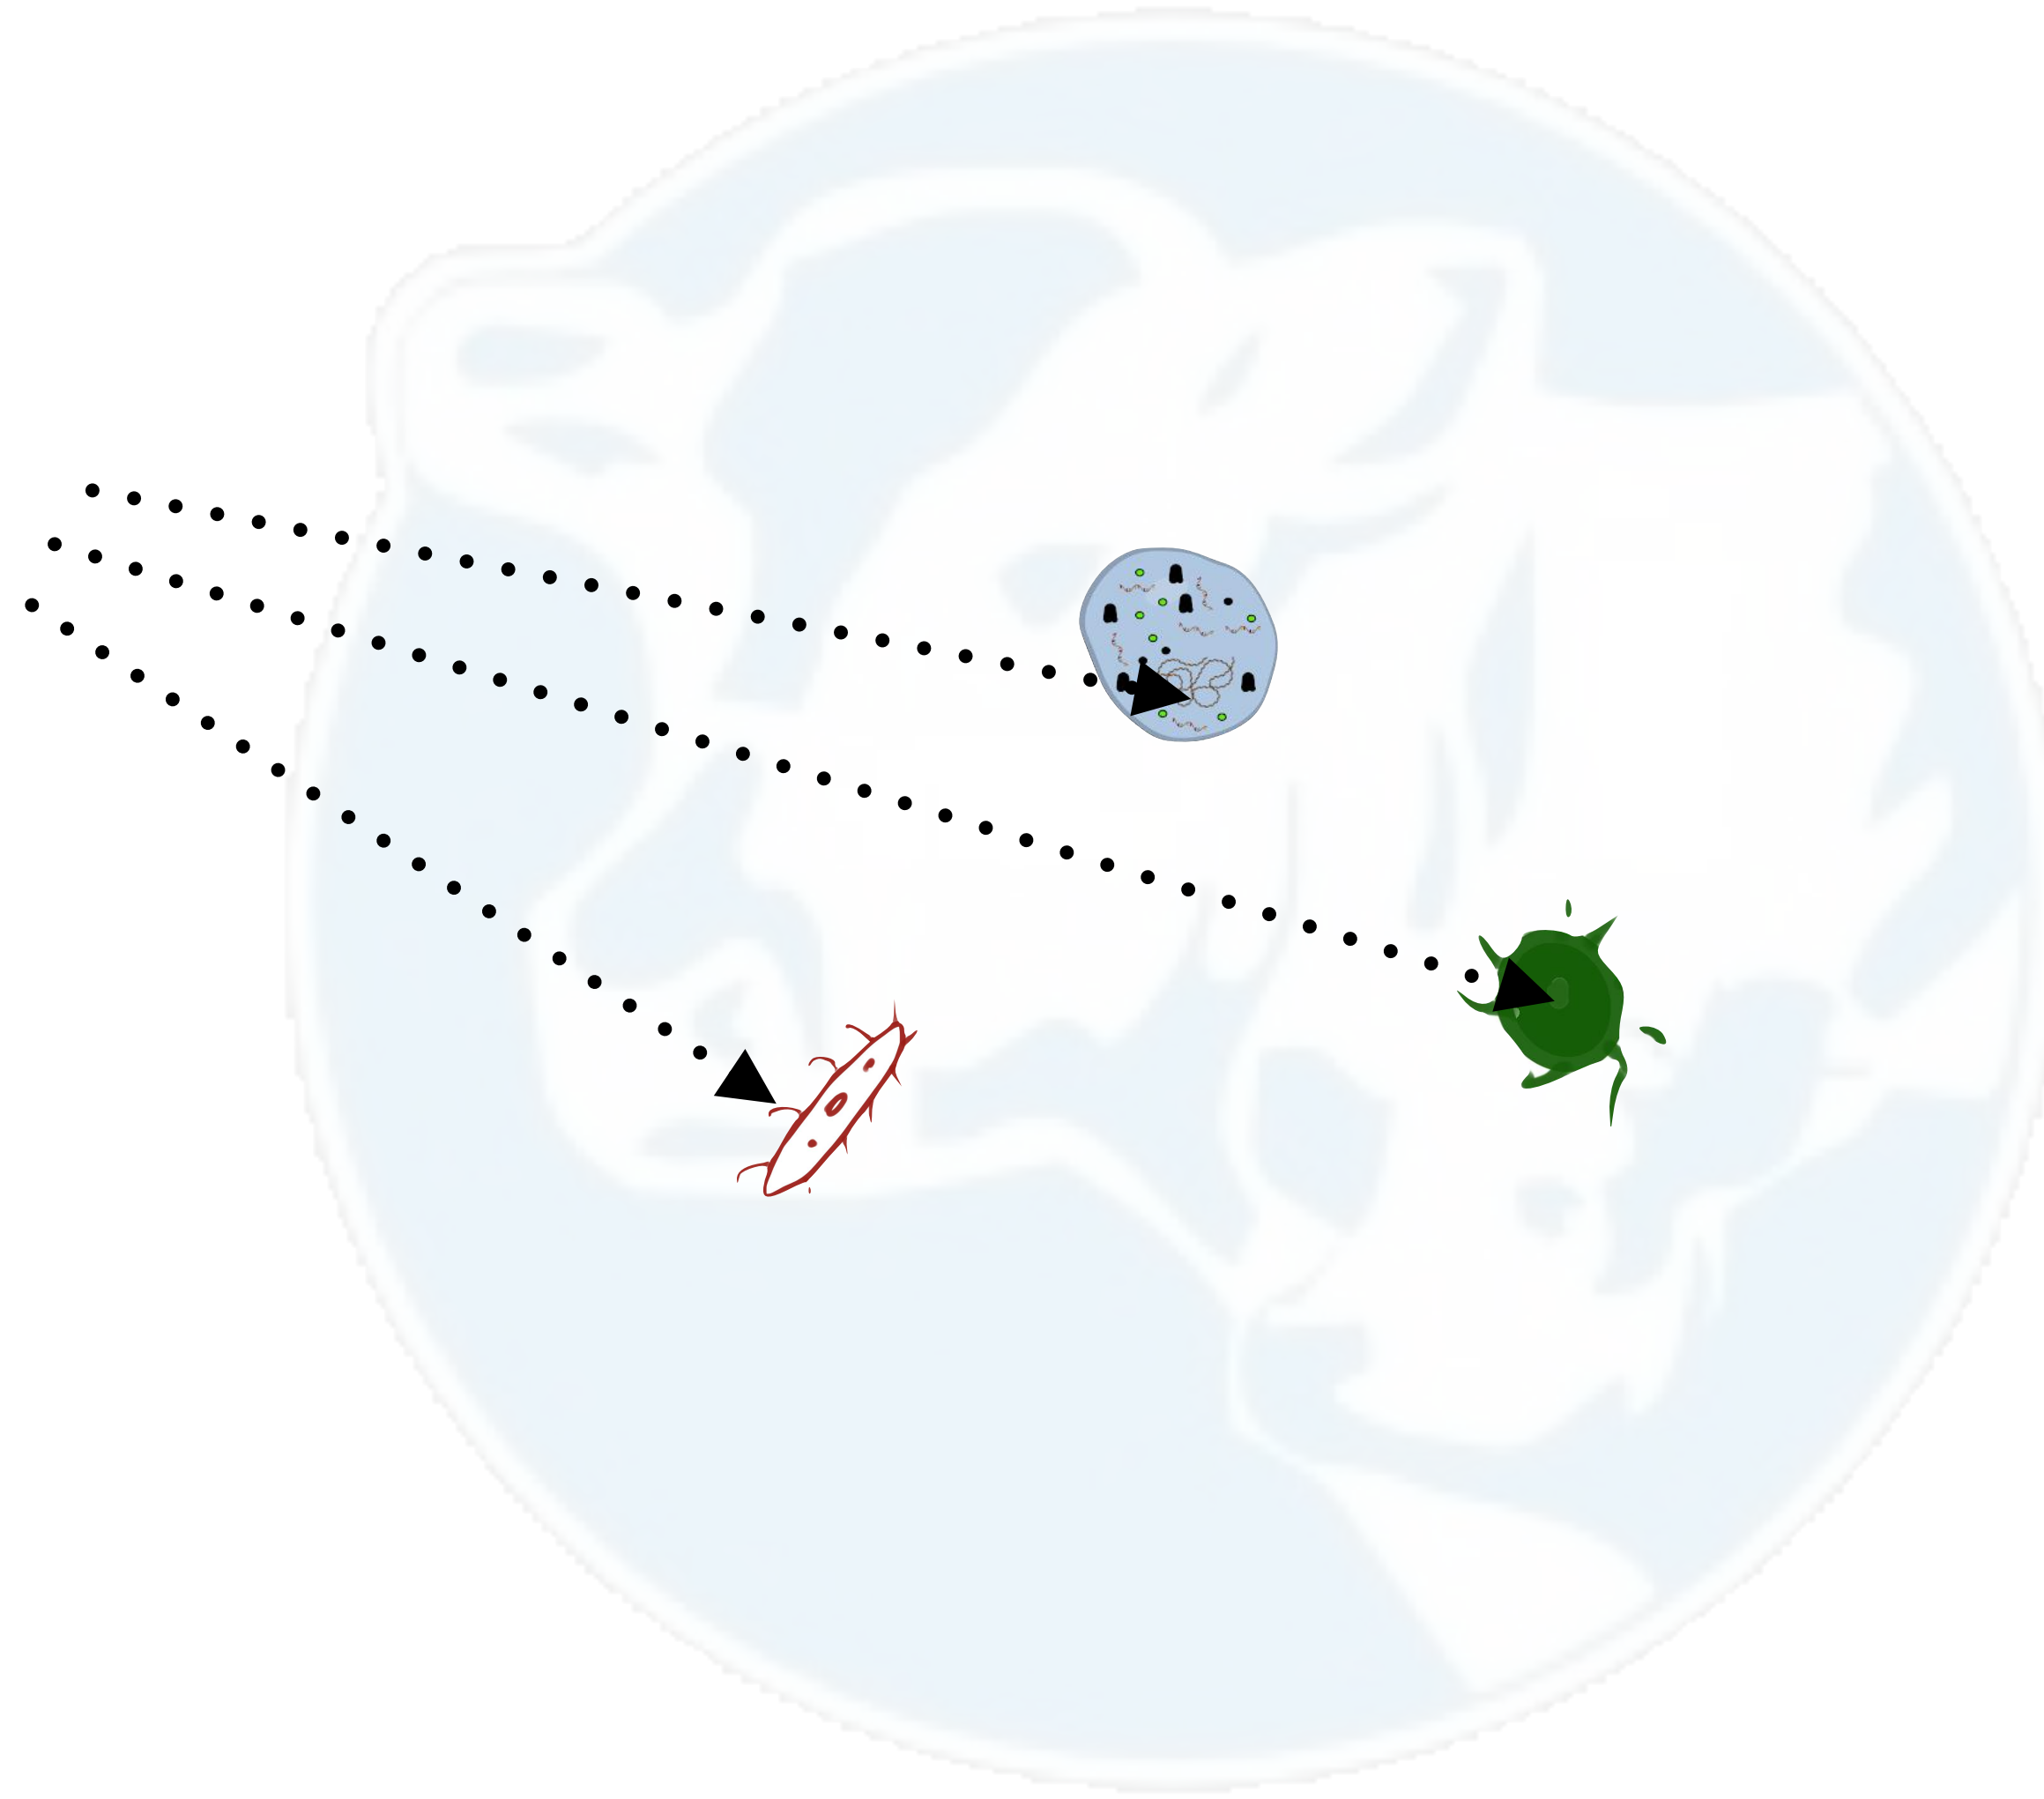

# Proteolytic Enzymes of Fibrulyse Dissolve the Biofilm

**FIBRU-LYSE**  
POWDER

# Combination of Oxytetracycline & Tylosine /Antimicrobial

**FIBRU-LYSE**  
POWDER

# Coliform Mastitis

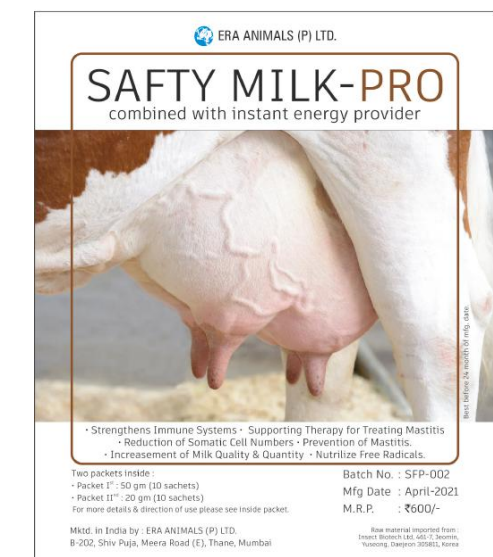

Focus on systemic treatment / treatment of toxæmia

# So Coliform Mastitis Includes

Parental

Oral Supplement

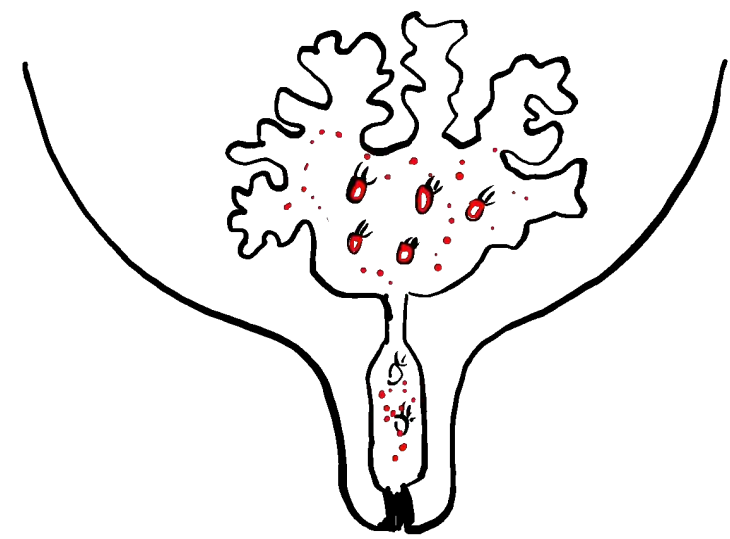

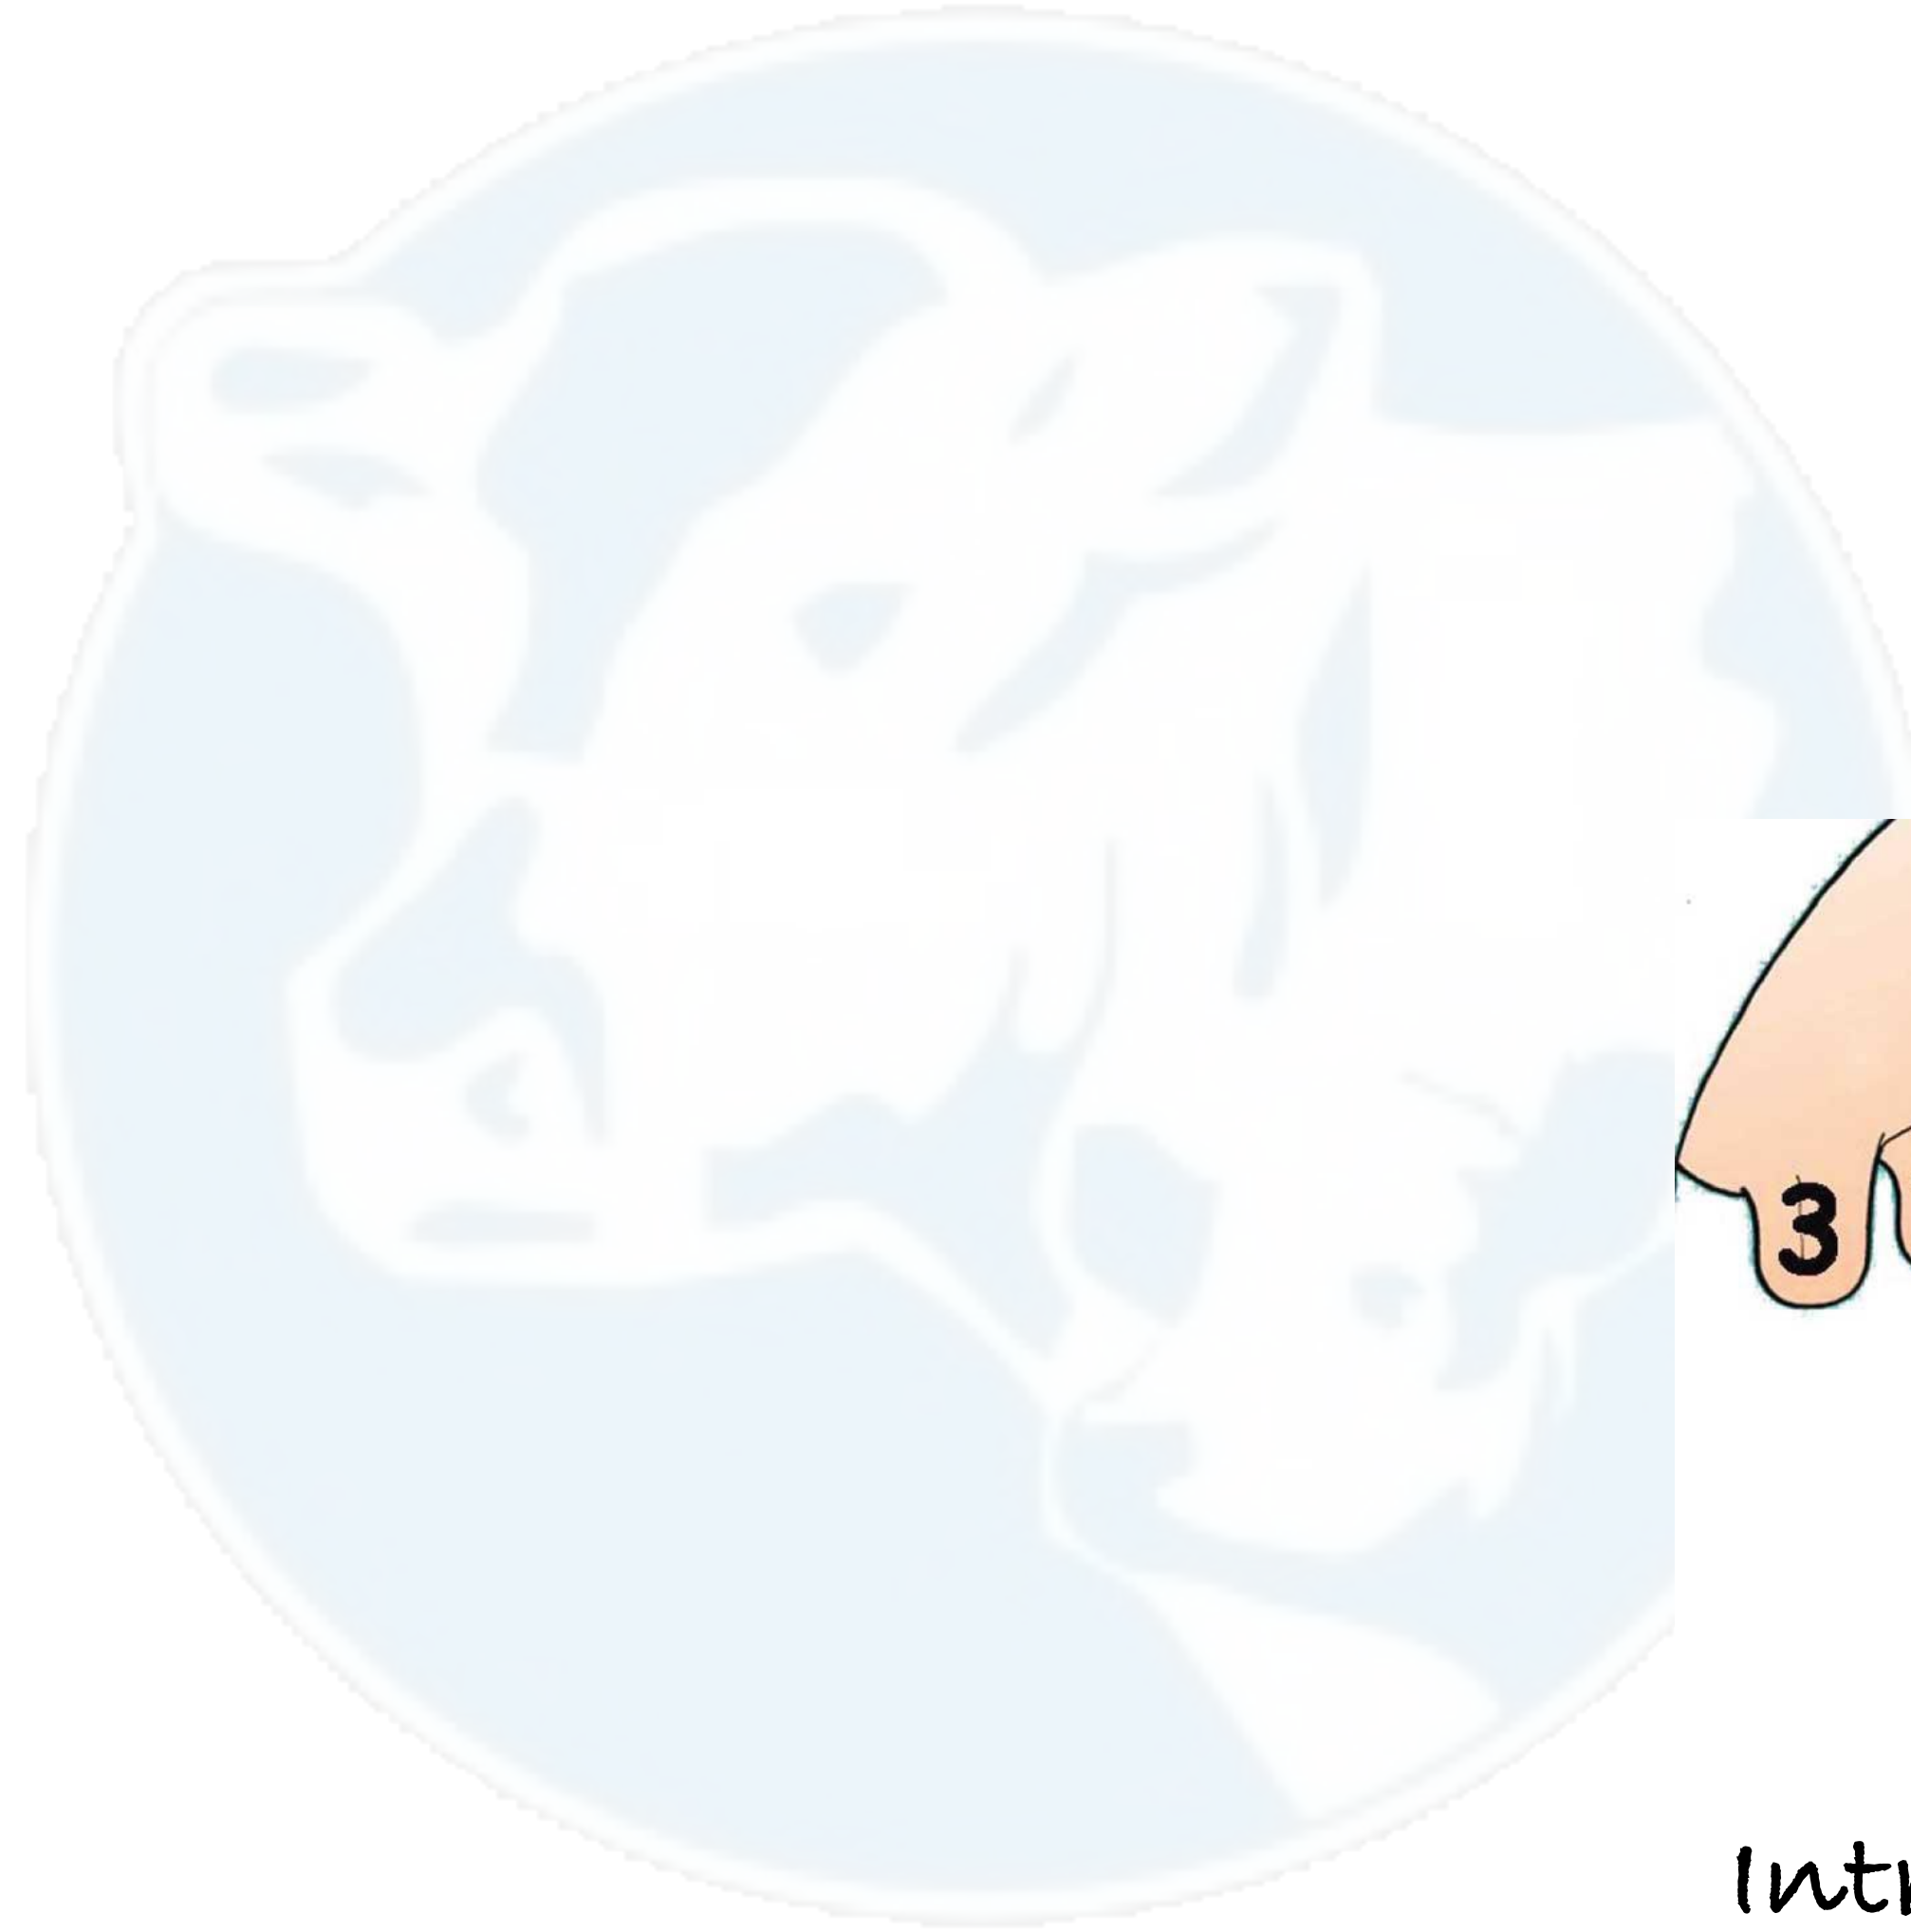

Antibiotics & Anti  
Inflammatory / Steroids

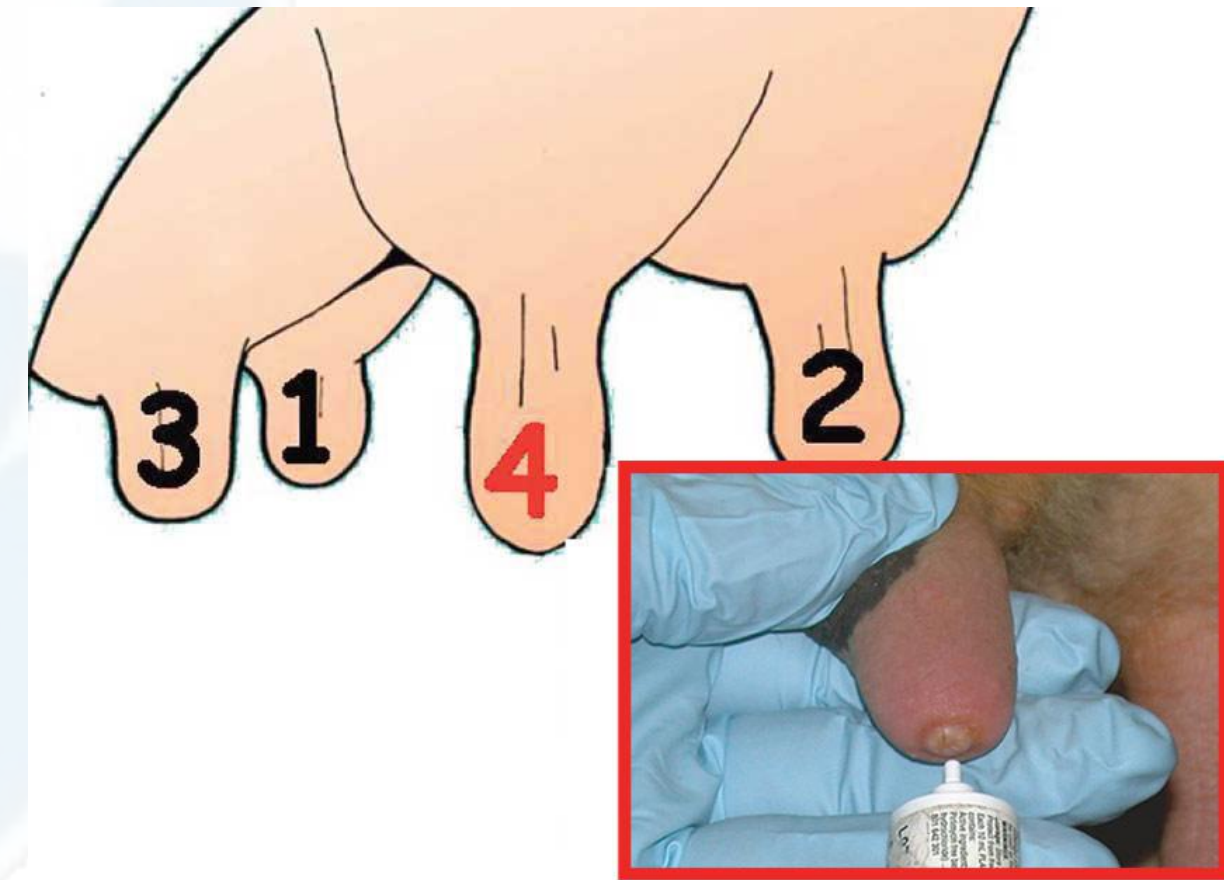

Fluid Therapy

Safety Milk Pro

Also includes

Regular Stripping

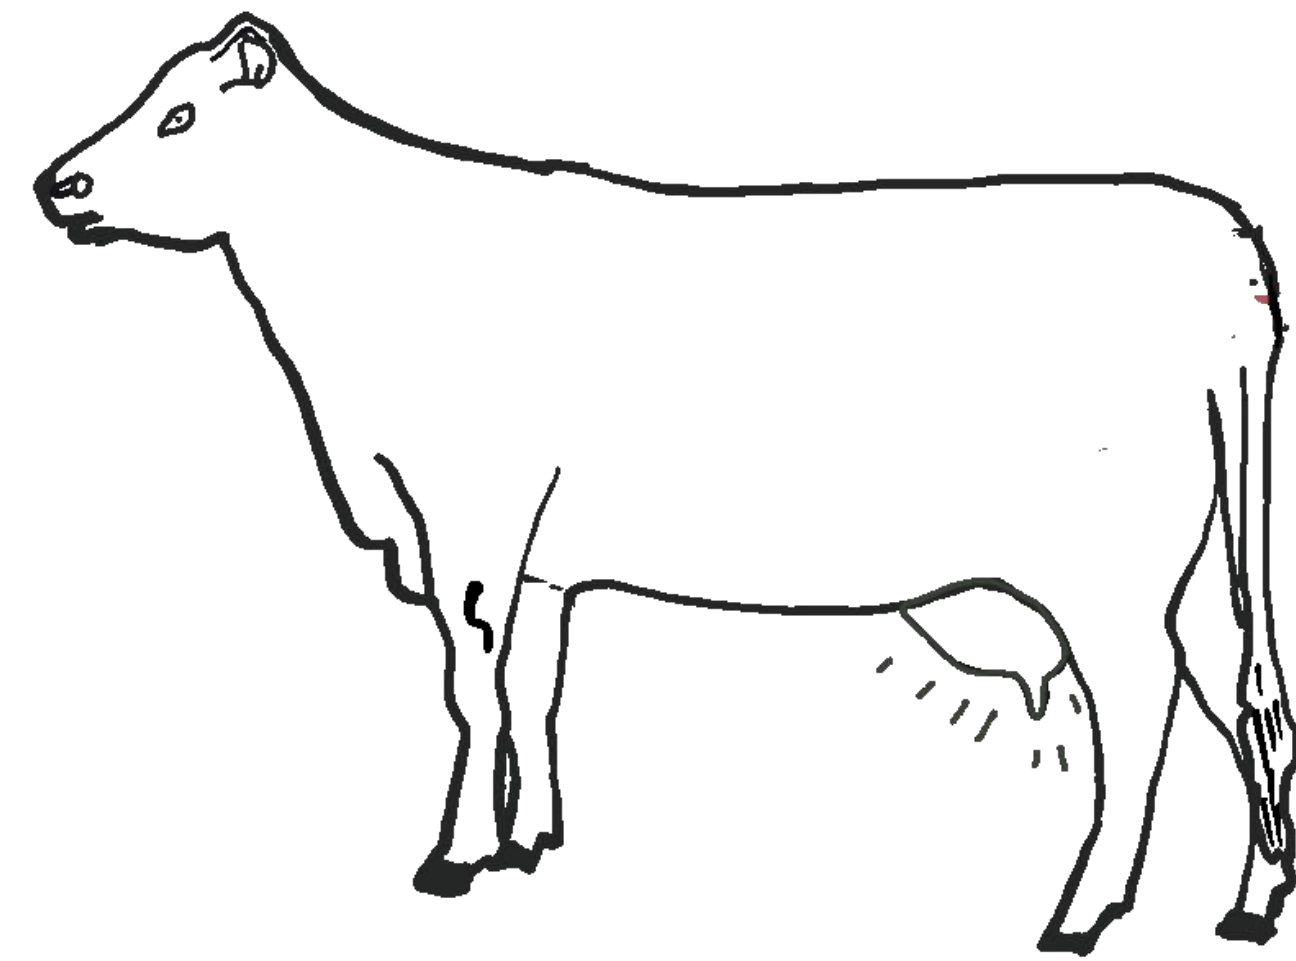

Intramammary Infusion  
Not Recommended

Why ???

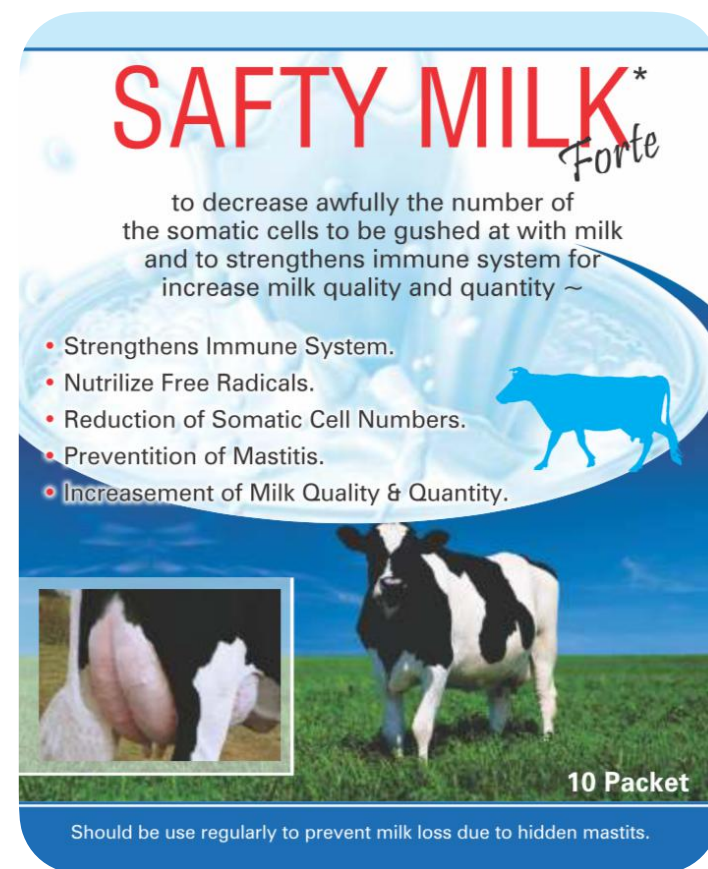

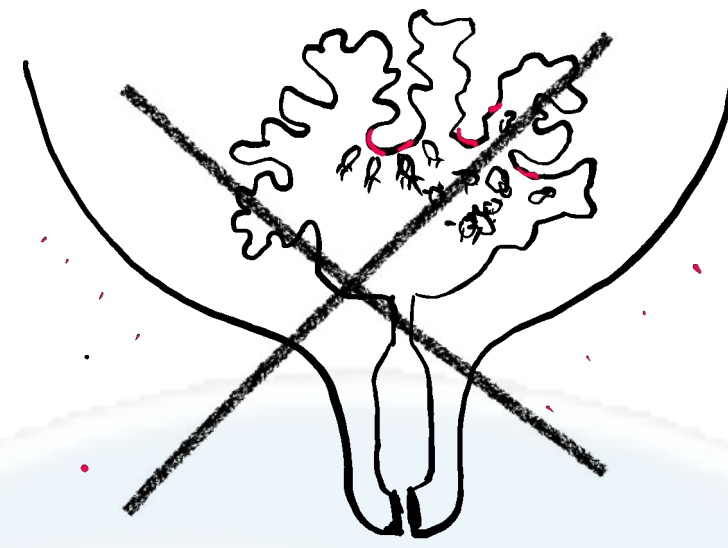

Reason discussed before

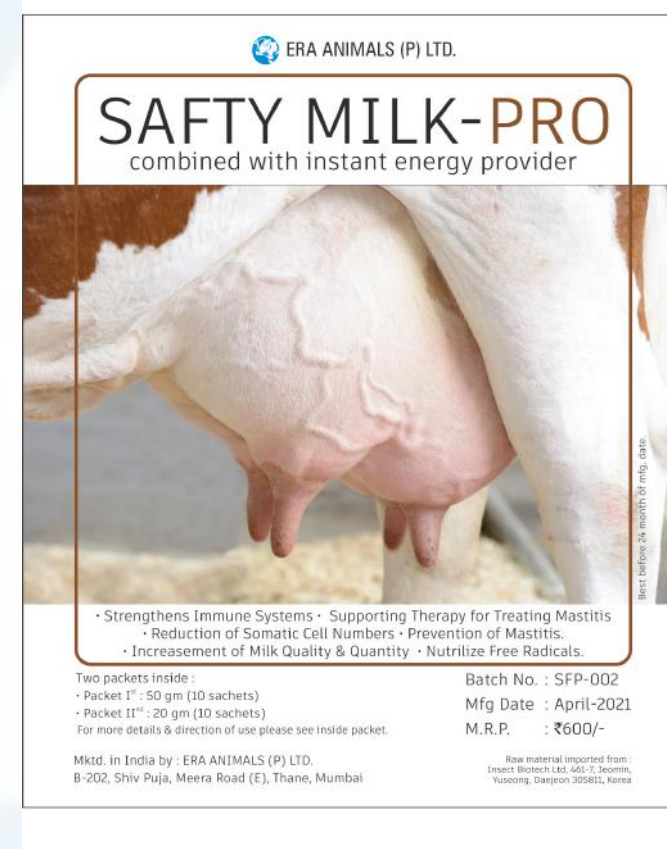

Hope this information helps you ...

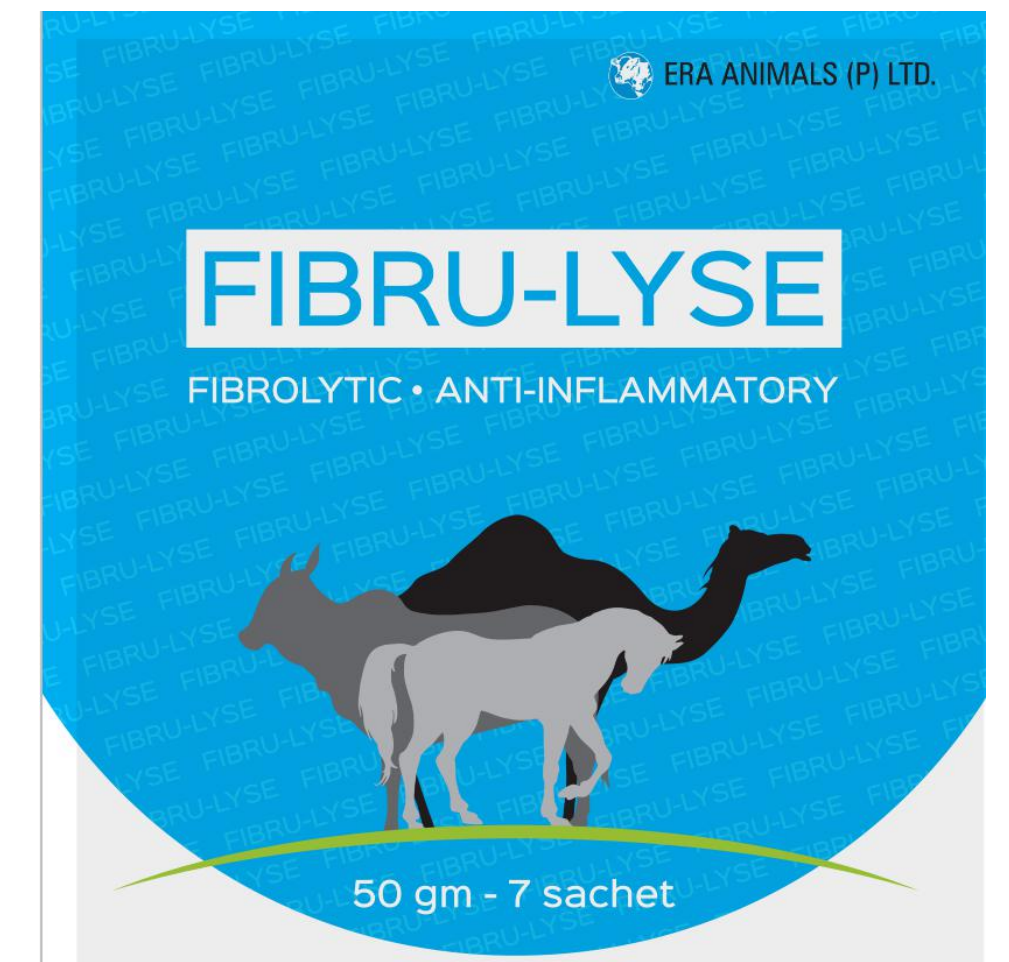

In better treatment of mastitis

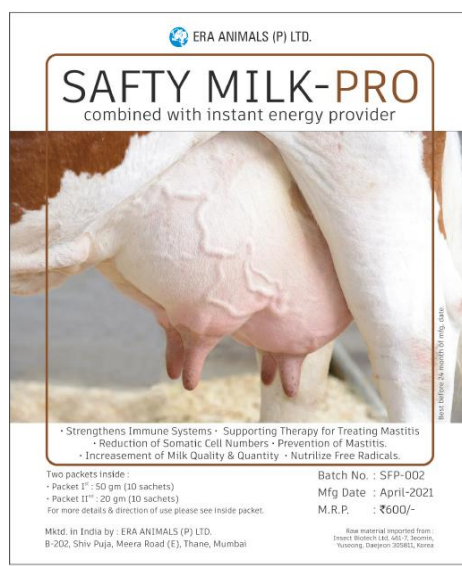

For Hidden Mastitis/Prevention of Mastitis

For Clinical Mastitis

For Fibrosed Mastitis
